

**DRUG-COATED STENTS AND METHODS OF USE THEREFOR**

This application claims the benefit of U.S. provisional application no. 60/437,332, filed December 31, 2002, the contents of which are incorporated by  
10 reference herein in their entirety.

**1. FIELD OF INVENTION**

This invention relates to stents comprising an effective amount of a c-Jun N-terminal kinase ("JNK") Inhibitor, the stents being useful for treating or preventing a cardiovascular or renal disease. The invention also relates to the treatment or prevention  
15 of cardiovascular or renal disease, such as atherosclerosis or restenosis, comprising implanting into a patient in need thereof of a stent comprising an effective amount of a JNK Inhibitor.

**2. BACKGROUND OF THE INVENTION****2.1 PATHOBIOLOGY OF ATHEROSCLEROSIS AND RESTINOSIS**  
20

In 1999, there were almost 1 million deaths due to vascular disease in the United States (twice as many as from cancer and 10 times as many as from accidents). National Vital Statistics Reports, Vol. 49, No. 8. Vascular disease may affect the brain, heart, kidneys and other vital organs as well as the extremities. Ross R., *Annu. Rev. Physiol.* 57:791-804, 1995.  
25

The most common and serious vascular disease is atherosclerosis. Atherosclerosis is characterized by patchy subintimal thickening (atheromas) of the arteries and involves the whole arterial vessel tree. Espinola-Klein C. *et al.*, *Med. Klin.* 97(4):221-228, 2002.

30 Development of atherosclerotic lesions involves proliferation of cellular constituents of the wall of blood vessels in response to chemical stimuli from platelets and monocytes derived from the blood. This proliferation of cells in the vessel wall can lead to narrowing of the lumen of the vessel. In addition, atherosclerotic plaques, the focal lesions of atherosclerosis, can be sites of thrombus or clot formation, hemorrhage,

5 or ulceration leading to interruption of the blood supply of the organ supplied by the affected blood vessel.

Two main hypotheses have been proposed to explain the pathogenesis of atherosclerosis: the lipid hypothesis and the chronic endothelial injury hypothesis.

10 The lipid hypothesis postulates that an elevation in plasma LDL levels results in penetration of LDL into the arterial wall, leading to lipid accumulation in smooth muscle cells and in macrophages (foam cells).

The chronic endothelial injury hypothesis postulates that endothelial injury by various mechanisms produces loss of endothelium, adhesion of platelets to subendothelium, aggregation of platelets to subendothelium, aggregation of platelets, 15 chemotaxis of monocytes and T-cell lymphocytes, and release of the platelet-derived and monocyte-derived growth factors that induce migration of smooth muscle cells from the media into the intima, where they replicate, synthesize connective tissue and proteoglycans and form a fibrous plaque.

Further, it has been suggested that the level of macrophage colony stimulating factor (M-CSF) in the atherectomy tissue can indicate, or predict the 20 likelihood or degree of, restenosis in post vascular intervention tissue. Takano et al., *Circulation*, 98 (17, Supp): 4437, 1998.

Atherosclerosis is characteristically asymptomatic until critical stenosis, thrombosis, aneurysm or embolus supervenes. Initially, symptoms and signs reflect an 25 inability of blood flow to the affected tissue to increase with demand (*e.g.*, angina or exertion, intermittent claudication). Symptoms and signs commonly develop gradually as the atheroma slowly encroach on the vessel lumen. However, when a major artery is acutely occluded, the results can be serious, such as, for example, infarction of heart muscle as described above.

30 Traditional therapy for prevention or inhibition of cardiovascular and cerebrovascular complications of atherosclerosis is an indirect approach aimed at reducing or reversing the risk factors associated with atherosclerosis such as cigarette smoking, obesity, abnormal serum levels (LDL cholesterol levels), hypertension, diabetes mellitus, hyperhomocysteinemia and possibly *C. pneumoniae* infection.

5                   Unfortunately, vascular intervention, including angioplasty, stenting,  
atherectomy and grafting is often complicated by endothelial and smooth muscle cell  
proliferation resulting in restenosis or re-clogging of the artery. This may be due to  
endothelial cell injury caused by the treatment itself. Treatment of restenosis often  
involves a second angioplasty or bypass surgery. The drawbacks of such treatment are  
10   obvious including the risk of repeated restenosis.

                  In terms of the biological mechanism and characteristics leading to  
restenosis, accumulation of an extracellular matrix containing collagen and  
proteoglycans in association with smooth muscle cells characterizes both the atheroma  
and the arterial hyperplastic lesions that lead to restenosis after balloon injury or clinical  
15   angioplasty.

                  Various therapies have been attempted for treating or preventing  
restenosis. For example, the administration of multivitamins having antioxidant  
properties (30,000 IU of beta carotene, 500 mg of vitamin C and 700 IU of vitamin E)  
and/or probucol (500 mg) has been studied. The vitamins were administered twice daily  
20   for four weeks prior and six months after angioplasty, Tardif et al., *N. Engl. J. Med.*:  
337(6): 365-72, 1997. The antioxidant vitamins alone had no effect. Probucol did  
reduce the rate of restenosis after angioplasty by almost 50%. However, probucol was  
removed from the U.S. market for reducing HDL cholesterol levels and causing heart  
rhythm disturbances that potentially lead to dangerous arrhythmias.

25               Intracoronary irradiation during angioplasty and stent implantation to  
reduce the instances of restenosis have likewise been studied. Limitations of these  
methods include, for example, handling stents filled with radioactive liquid (Re 188-  
radioactive rhenium).

                  Clearly, there remains a great need for therapies useful for the prevention  
30   and treatment of atherosclerosis, restenosis and related disorders.

## **2.2    C-JUN N-TERMINAL KINASE**

                  Three JNK enzymes have been identified. These represent alternatively  
spliced forms of three different genes: JNK1, JNK2, and JNK3 (Hibi M., Lin A., Smeal  
T., Minden A., Karin M. *Genes Dev.* 7:2135-2148, 1993; Mohit A.A., Martin M.H., and  
35   Miller C.A. *Neuron* 14:67-78, 1995; Gupta, S., Barrett, T., Whitmarsh, A.J., Cavanagh,

5 J., Sluss, H.K., Derijard, B. and Davis, R.J. *The EMBO J.* 15:2760-2770, 1996).  
Activation of the JNK pathway has been documented in a number of disease settings,  
providing the rationale for targeting this pathway for drug discovery. In addition,  
molecular genetic approaches have validated the pathogenic role of the JNK pathway in  
several diseases.

10 The JNK pathway regulates TNF- $\alpha$  production in bacterial  
lipopolysaccharide-stimulated macrophages, and in mast cells stimulated through the  
FceRII receptor (Swanek J.L., Cobb M.H., Geppert T.D. *Mol. Cell. Biol.* 17:6274-6282,  
1997; Ishizuka T., Tereda N., Gerwins P., Hamelmann E., Oshiba A., Fanger G.R.,  
Johnson G.L., and Gelfand E.W. *Proc. Nat. Acad. Sci. USA* 94:6358-6363, 1997).

15 Inhibition of JNK activation effectively modulates TNF- $\alpha$  secretion from these cells.  
Therefore, the JNK pathway regulates production of this key pro-inflammatory cytokine.  
Activated endothelial cells and smooth muscle cells both elaborate the B and T cell  
activator IL-6. IL-6 accounts for almost 4% of the newly synthesized proteins secreted  
by smooth muscle cells stimulated by IL-1. Human vascular wall cells also produce the  
20 monocyte chemoattractant and activator monocyte chemoattractant protein-1 (MCP-  
1)/JE (also known as macrophage chemoattractant and activating factor) and the  
monocyte differentiation and activating factor M-CSF (a macrophage colony stimulating  
factor). Accordingly, without being limited by theory, inhibition of JNK can limit the  
production of M-CSF and provide an effective method for treating or preventing  
25 atherosclerosis or restinosis.

### 3. SUMMARY OF THE INVENTION

In one embodiment, the present invention relates to a stent comprising an  
effective amount of a JNK Inhibitor, the stent (the "Stent of the Invention") being useful  
for treating or preventing a cardiovascular or renal disease. In one embodiment, the  
30 Stent of the Invention comprises a coating comprising an effective amount of a JNK  
Inhibitor (the "coating"). In another embodiment, the stent comprises a material having  
an effective amount of a JNK Inhibitor incorporated therein (the "material").

5                   In another embodiment, the present invention encompasses a method for making a Stent of the Invention comprising the step of coating a stent with an effective amount of a JNK Inhibitor.

                  In another embodiment, the present invention encompasses a method for making a Stent of the Invention comprising the step of manufacturing a stent using a  
10               material having an effective amount of a JNK Inhibitor incorporated therein.

                  In another embodiment, the present invention encompasses methods for treating or preventing a cardiovascular or renal disease, comprising implanting a Stent of the Invention into a patient in need thereof.

                  In another embodiment, the present invention encompasses a kit  
15               comprising a Stent of the Invention and directions for its use.

                  The following Detailed Description and Examples illustrate non-limiting embodiments of the invention.

### **3.1     DEFINITIONS**

                  As used herein, the term “patient” means an animal (*e.g.*, cow, horse,  
20               sheep, pig, chicken, turkey, quail, cat, dog, mouse, rat, rabbit or guinea pig), preferably a mammal such as a non-primate or a primate (*e.g.*, monkey or human), most preferably a human.

                  “Alkyl” means a saturated straight chain or branched non-cyclic hydrocarbon having from 1 to 10 carbon atoms. “Lower alkyl” means alkyl, as defined  
25               above, having from 1 to 4 carbon atoms. Representative saturated straight chain alkyls include -methyl, -ethyl, -n-propyl, -n-butyl, -n-pentyl, -n-hexyl, -n-heptyl, -n-octyl, -n-nonyl and -n-decyl; while saturated branched alkyls include -isopropyl, -*sec*-butyl, -isobutyl, -*tert*-butyl, -isopentyl, 2-methylbutyl, 3-methylbutyl, 2-methylpentyl, 3-methylpentyl, 4-methylpentyl, 2-methylhexyl, 3-methylhexyl, 4-methylhexyl, 5-  
30               methylhexyl, 2,3-dimethylbutyl, 2,3-dimethylpentyl, 2,4-dimethylpentyl, 2,3-dimethylhexyl, 2,4-dimethylhexyl, 2,5-dimethylhexyl, 2,2-dimethylpentyl, 2,2-dimethylhexyl, 3,3-dimethylpentyl, 3,3-dimethylhexyl, 4,4-dimethylhexyl, 2-ethylpentyl, 3-ethylpentyl, 2-ethylhexyl, 3-ethylhexyl, 4-ethylhexyl, 2-methyl-2-ethylpentyl, 2-methyl-3-ethylpentyl, 2-methyl-4-ethylpentyl, 2-methyl-2-ethylhexyl, 2-methyl-3-

5 ethylhexyl, 2-methyl-4-ethylhexyl, 2,2-diethylpentyl, 3,3-diethylhexyl, 2,2-diethylhexyl, 3,3-diethylhexyl and the like.

An “alkenyl group” or “alkylidene” mean a straight chain or branched non-cyclic hydrocarbon having from 2 to 10 carbon atoms and including at least one carbon-carbon double bond. Representative straight chain and branched (C<sub>2</sub>-  
10 C<sub>10</sub>)alkenyls include -vinyl, -allyl, -1-butenyl, -2-butenyl, -isobutylenyl, -1-pentenyl, -2-pentenyl, -3-methyl-1-butenyl, -2-methyl-2-butenyl, -2,3-dimethyl-2-butenyl, -1-hexenyl, -2-hexenyl, -3-hexenyl, -1-heptenyl, -2-heptenyl, -3-heptenyl, -1-octenyl, -2-octenyl, -3-octenyl, -1-nonenyl, -2-nonenyl, -3-nonenyl, -1-decenyl, -2-decenyl, -3-decenyl and the like. An alkenyl group can be unsubstituted or substituted. A “cyclic  
15 alkylidene” is a ring having from 3 to 8 carbon atoms and including at least one carbon-carbon double bond, wherein the ring can have from 1 to 3 heteroatoms.

An “alkynyl group” means a straight chain or branched non-cyclic hydrocarbon having from 2 to 10 carbon atoms and including at least one carbon-carbon triple bond. Representative straight chain and branched -(C<sub>2</sub>-C<sub>10</sub>)alkynyls include  
20 -acetylenyl, -propynyl, -1-butyne, -2-butyne, -1-pentyne, -2-pentyne, -3-methyl-1-butyne, -4-pentyne, -1-hexyne, -2-hexyne, -5-hexyne, -1-heptyne, -2-heptyne, -6-heptyne, -1-octyne, -2-octyne, -7-octyne, -1-nonyne, -2-nonyne, -8-nonyne, -1-decynyl, -2-decynyl, -9-decynyl, and the like. An alkynyl group can be unsubstituted or substituted.

25 The terms “Halogen” and “Halo” mean fluorine, chlorine, bromine or iodine.

“Haloalkyl” means an alkyl group, wherein alkyl is defined above, substituted with one or more halogen atoms.

“Keto” means a carbonyl group (*i.e.*, C=O).

30 “Acyl” means an -C(O)alkyl group, wherein alkyl is defined above, including -C(O)CH<sub>3</sub>, -C(O)CH<sub>2</sub>CH<sub>3</sub>, -C(O)(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -C(O)(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -C(O)(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -C(O)(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.

“Acyloxy” means an -OC(O)alkyl group, wherein alkyl is defined above, including -OC(O)CH<sub>3</sub>, -OC(O)CH<sub>2</sub>CH<sub>3</sub>, -OC(O)(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -OC(O)(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>,  
35 -OC(O)(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -OC(O)(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.

5                   “Ester” means and -C(O)Oalkyl group, wherein alkyl is defined above, including -C(O)OCH<sub>3</sub>, -C(O)OCH<sub>2</sub>CH<sub>3</sub>, -C(O)O(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -C(O)O(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -C(O)O(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -C(O)O(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.

                  “Alkoxy” means -O-(alkyl), wherein alkyl is defined above, including -OCH<sub>3</sub>, -OCH<sub>2</sub>CH<sub>3</sub>, -O(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -O(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -O(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -O(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the  
10   like. “Lower alkoxy” means -O-(lower alkyl), wherein lower alkyl is as described above.

                  “Alkoxyalkoxy” means -O-(alkyl)-O-(alkyl), wherein each alkyl is independently an alkyl group defined above, including -OCH<sub>2</sub>OCH<sub>3</sub>, -OCH<sub>2</sub>CH<sub>2</sub>OCH<sub>3</sub>, -OCH<sub>2</sub>CH<sub>2</sub>OCH<sub>2</sub>CH<sub>3</sub>, and the like.

                  “Alkoxycarbonyl” means -C(=O)O-(alkyl), wherein alkyl is defined  
15   above, including -C(=O)O-CH<sub>3</sub>, -C(=O)O-CH<sub>2</sub>CH<sub>3</sub>, -C(=O)O-(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -C(=O)O-(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -C(=O)O-(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -C(=O)O-(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.

                  “Alkoxycarbonylalkyl” means -(alkyl)-C(=O)O-(alkyl), wherein each alkyl is independently defined above, including -CH<sub>2</sub>-C(=O)O-CH<sub>3</sub>, -CH<sub>2</sub>-C(=O)O-CH<sub>2</sub>CH<sub>3</sub>, -CH<sub>2</sub>-C(=O)O-(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -CH<sub>2</sub>-C(=O)O-(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -CH<sub>2</sub>-C(=O)O-(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -CH<sub>2</sub>-C(=O)O-(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.  
20

                  “Alkoxyalkyl” means -(alkyl)-O-(alkyl), wherein each alkyl is independently an alkyl group defined above, including -CH<sub>2</sub>OCH<sub>3</sub>, -CH<sub>2</sub>OCH<sub>2</sub>CH<sub>3</sub>, -(CH<sub>2</sub>)<sub>2</sub>OCH<sub>2</sub>CH<sub>3</sub>, -(CH<sub>2</sub>)<sub>2</sub>O(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, and the like.

                  “Aryl” means a carbocyclic aromatic group containing from 5 to 10 ring  
25   atoms. Representative examples include, but are not limited to, phenyl, tolyl, anthracenyl, fluorenyl, indenyl, azulenyl, pyridinyl and naphthyl, as well as benzo-fused carbocyclic moieties including 5,6,7,8-tetrahydronaphthyl. A carbocyclic aromatic group can be unsubstituted or substituted. In one embodiment, the carbocyclic aromatic group is a phenyl group.

30                  “Aryloxy” means -O-aryl group, wherein aryl is as defined above. An aryloxy group can be unsubstituted or substituted. In one embodiment, the aryl ring of an aryloxy group is a phenyl group

                  “Arylalkyl” means -(alkyl)-(aryl), wherein alkyl and aryl are as defined above, including -(CH<sub>2</sub>)phenyl, -(CH<sub>2</sub>)<sub>2</sub>phenyl, -(CH<sub>2</sub>)<sub>3</sub>phenyl, -CH(phenyl)<sub>2</sub>,

5    -CH(phenyl)<sub>3</sub>, -(CH<sub>2</sub>)tolyl, -(CH<sub>2</sub>)anthracenyl, -(CH<sub>2</sub>)fluorenyl, -(CH<sub>2</sub>)indenyl,  
-(CH<sub>2</sub>)azulenyl, -(CH<sub>2</sub>)pyridinyl, -(CH<sub>2</sub>)naphthyl, and the like.

“Arylalkyloxy” means -O-(alkyl)-(aryl), wherein alkyl and aryl are defined above, including -O-(CH<sub>2</sub>)<sub>2</sub>phenyl, -O-(CH<sub>2</sub>)<sub>3</sub>phenyl, -O-CH(phenyl)<sub>2</sub>, -O-CH(phenyl)<sub>3</sub>, -O-(CH<sub>2</sub>)tolyl, -O-(CH<sub>2</sub>)anthracenyl, -O-(CH<sub>2</sub>)fluorenyl, -O-  
10    (CH<sub>2</sub>)indenyl, -O-(CH<sub>2</sub>)azulenyl, -O-(CH<sub>2</sub>)pyridinyl, -O-(CH<sub>2</sub>)naphthyl, and the like.

“Aryloxyalkyl” means -(alkyl)-O-(aryl), wherein alkyl and aryl are defined above, including -CH<sub>2</sub>-O-(phenyl), -(CH<sub>2</sub>)<sub>2</sub>-O-phenyl, -(CH<sub>2</sub>)<sub>3</sub>-O-phenyl, -(CH<sub>2</sub>)-O-tolyl, -(CH<sub>2</sub>)-O-anthracenyl, -(CH<sub>2</sub>)-O-fluorenyl, -(CH<sub>2</sub>)-O-indenyl, -(CH<sub>2</sub>)-O-azulenyl, -(CH<sub>2</sub>)-O-pyridinyl, -(CH<sub>2</sub>)-O-naphthyl, and the like.

15    “Cycloalkyl” means a monocyclic or polycyclic saturated ring having carbon and hydrogen atoms and having no carbon-carbon multiple bonds. Examples of cycloalkyl groups include, but are not limited to, (C<sub>3</sub>–C<sub>7</sub>)cycloalkyl groups, including cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, and cycloheptyl, and saturated cyclic and bicyclic terpenes. A cycloalkyl group can be unsubstituted or substituted. In one  
20    embodiment, the cycloalkyl group is a monocyclic ring or bicyclic ring.

“Cycloalkyloxy” means -O-(cycloalkyl), wherein cycloalkyl is defined above, including -O-cyclopropyl, -O-cyclobutyl, -O-cyclopentyl, -O-cyclohexyl, -O-cycloheptyl and the like.

“Cycloalkylalkyloxy” means -O-(alkyl)-(cycloalkyl), wherein cycloalkyl  
25    and alkyl are defined above, including -O-CH<sub>2</sub>-cyclopropyl, -O-(CH<sub>2</sub>)<sub>2</sub>-cyclopropyl, -O-(CH<sub>2</sub>)<sub>3</sub>-cyclopropyl, -O-(CH<sub>2</sub>)<sub>4</sub>-cyclopropyl, O-CH<sub>2</sub>-cyclobutyl, O-CH<sub>2</sub>-cyclopentyl, O-CH<sub>2</sub>-cyclohexyl, O-CH<sub>2</sub>-cycloheptyl, and the like.

“Aminoalkoxy” means -O-(alkyl)-NH<sub>2</sub>, wherein alkyl is defined above, such as -O-CH<sub>2</sub>-NH<sub>2</sub>, -O-(CH<sub>2</sub>)<sub>2</sub>-NH<sub>2</sub>, -O-(CH<sub>2</sub>)<sub>3</sub>-NH<sub>2</sub>, -O-(CH<sub>2</sub>)<sub>4</sub>-NH<sub>2</sub>, -O-(CH<sub>2</sub>)<sub>5</sub>-NH<sub>2</sub>,  
30    and the like.

“Mono-alkylamino” means -NH(alkyl), wherein alkyl is defined above, such as -NHCH<sub>3</sub>, -NHCH<sub>2</sub>CH<sub>3</sub>, -NH(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -NH(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -NH(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -NH(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.

5                   “Di-alkylamino” means -N(alkyl)(alkyl), wherein each alkyl is independently an alkyl group defined above, including -N(CH<sub>3</sub>)<sub>2</sub>, -N(CH<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -N((CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -N(CH<sub>3</sub>)(CH<sub>2</sub>CH<sub>3</sub>), and the like.

                  “Mono-alkylaminoalkoxy” means -O-(alkyl)-NH(alkyl), wherein each alkyl is independently an alkyl group defined above, including -O-(CH<sub>2</sub>)-NHCH<sub>3</sub>, -O-(CH<sub>2</sub>)-NHCH<sub>2</sub>CH<sub>3</sub>, -O-(CH<sub>2</sub>)-NH(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -O-(CH<sub>2</sub>)-NH(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -O-(CH<sub>2</sub>)-NH(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -O-(CH<sub>2</sub>)-NH(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, -O-(CH<sub>2</sub>)<sub>2</sub>-NHCH<sub>3</sub>, and the like.

                  “Di-alkylaminoalkoxy” means -O-(alkyl)-N(alkyl)(alkyl), wherein each alkyl is independently an alkyl group defined above, including -O-(CH<sub>2</sub>)-N(CH<sub>3</sub>)<sub>2</sub>, -O-(CH<sub>2</sub>)-N(CH<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -O-(CH<sub>2</sub>)-N((CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -O-(CH<sub>2</sub>)-N(CH<sub>3</sub>)(CH<sub>2</sub>CH<sub>3</sub>), and the like.

                  “Arylamino” means -NH(aryl), wherein aryl is defined above, including -NH(phenyl), -NH(tolyl), -NH(anthracenyl), -NH(fluorenyl), -NH(indenyl), -NH(azulenyl), -NH(pyridinyl), -NH(naphthyl), and the like.

                  “Arylalkylamino” means -NH-(alkyl)-(aryl), wherein alkyl and aryl are defined above, including -NH-CH<sub>2</sub>-(phenyl), -NH-CH<sub>2</sub>-(tolyl), -NH-CH<sub>2</sub>-(anthracenyl), -NH-CH<sub>2</sub>-(fluorenyl), -NH-CH<sub>2</sub>-(indenyl), -NH-CH<sub>2</sub>-(azulenyl), -NH-CH<sub>2</sub>-(pyridinyl), -NH-CH<sub>2</sub>-(naphthyl), -NH-(CH<sub>2</sub>)<sub>2</sub>-(phenyl) and the like.

                  “Alkylamino” means mono-alkylamino or di-alkylamino as defined above, such as -N(alkyl)(alkyl), wherein each alkyl is independently an alkyl group defined above, including -N(CH<sub>3</sub>)<sub>2</sub>, -N(CH<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -N((CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -N(CH<sub>3</sub>)(CH<sub>2</sub>CH<sub>3</sub>) and -N(alkyl)(alkyl), wherein each alkyl is independently an alkyl group defined above, including -N(CH<sub>3</sub>)<sub>2</sub>, -N(CH<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -N((CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -N(CH<sub>3</sub>)(CH<sub>2</sub>CH<sub>3</sub>) and the like.

                  “Cycloalkylamino” means -NH-(cycloalkyl), wherein cycloalkyl is as defined above, including -NH-cyclopropyl, -NH-cyclobutyl, -NH-cyclopentyl, -NH-cyclohexyl, -NH-cycloheptyl, and the like.

                  “Carboxyl” and “carboxy” mean -COOH.

                  “Cycloalkylalkylamino” means -NH-(alkyl)-(cycloalkyl), wherein alkyl and cycloalkyl are defined above, including -NH-CH<sub>2</sub>-cyclopropyl, -NH-CH<sub>2</sub>-cyclobutyl, -NH-CH<sub>2</sub>-cyclopentyl, -NH-CH<sub>2</sub>-cyclohexyl, -NH-CH<sub>2</sub>-cycloheptyl, -NH-(CH<sub>2</sub>)<sub>2</sub>-cyclopropyl and the like.

5                   “Aminoalkyl” means -(alkyl)-NH<sub>2</sub>, wherein alkyl is defined above, including CH<sub>2</sub>-NH<sub>2</sub>, -(CH<sub>2</sub>)<sub>2</sub>-NH<sub>2</sub>, -(CH<sub>2</sub>)<sub>3</sub>-NH<sub>2</sub>, -(CH<sub>2</sub>)<sub>4</sub>-NH<sub>2</sub>, -(CH<sub>2</sub>)<sub>5</sub>-NH<sub>2</sub> and the like.

                  “Mono-alkylaminoalkyl” means -(alkyl)-NH(alkyl), wherein each alkyl is independently an alkyl group defined above, including -CH<sub>2</sub>-NH-CH<sub>3</sub>, -CH<sub>2</sub>-NHCH<sub>2</sub>CH<sub>3</sub>, -CH<sub>2</sub>-NH(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -CH<sub>2</sub>-NH(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -CH<sub>2</sub>-NH(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -CH<sub>2</sub>-NH(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, -(CH<sub>2</sub>)<sub>2</sub>-NH-CH<sub>3</sub>, and the like.

                  “Di-alkylaminoalkyl” means -(alkyl)-N(alkyl)(alkyl), wherein each alkyl is independently an alkyl group defined above, including -CH<sub>2</sub>-N(CH<sub>3</sub>)<sub>2</sub>, -CH<sub>2</sub>-N(CH<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -CH<sub>2</sub>-N((CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>)<sub>2</sub>, -CH<sub>2</sub>-N(CH<sub>3</sub>)(CH<sub>2</sub>CH<sub>3</sub>), -(CH<sub>2</sub>)<sub>2</sub>-N(CH<sub>3</sub>)<sub>2</sub>, and the like.

15                   “Heteroaryl” means an aromatic heterocycle ring of 5- to 10 members and having at least one heteroatom selected from nitrogen, oxygen and sulfur, and containing at least 1 carbon atom, including both mono- and bicyclic ring systems. Representative heteroaryls are triazolyl, tetrazolyl, oxadiazolyl, pyridyl, furyl, benzofuranyl, thiophenyl, benzothiophenyl, quinolinyl, pyrrolyl, indolyl, oxazolyl, benzoxazolyl, imidazolyl, benzimidazolyl, thiazolyl, benzothiazolyl, isoxazolyl, pyrazolyl, isothiazolyl, pyridazinyl, pyrimidinyl, pyrazinyl, triazinyl, cinnolinyl, phthalazinyl, quinazolinyl, pyrimidyl, oxetanyl, azepinyl, piperazinyl, morpholinyl, dioxanyl, thietanyl and oxazolyl.

                  “Heteroarylalkyl” means -(alkyl)-(heteroaryl), wherein alkyl and heteroaryl are defined above, including -CH<sub>2</sub>-triazolyl, -CH<sub>2</sub>-tetrazolyl, -CH<sub>2</sub>-oxadiazolyl, -CH<sub>2</sub>-pyridyl, -CH<sub>2</sub>-furyl, -CH<sub>2</sub>-benzofuranyl, -CH<sub>2</sub>-thiophenyl, -CH<sub>2</sub>-benzothiophenyl, -CH<sub>2</sub>-quinolinyl, -CH<sub>2</sub>-pyrrolyl, -CH<sub>2</sub>-indolyl, -CH<sub>2</sub>-oxazolyl, -CH<sub>2</sub>-benzoxazolyl, -CH<sub>2</sub>-imidazolyl, -CH<sub>2</sub>-benzimidazolyl, -CH<sub>2</sub>-thiazolyl, -CH<sub>2</sub>-benzothiazolyl, -CH<sub>2</sub>-isoxazolyl, -CH<sub>2</sub>-pyrazolyl, -CH<sub>2</sub>-isothiazolyl, -CH<sub>2</sub>-pyridazinyl, -CH<sub>2</sub>-pyrimidinyl, -CH<sub>2</sub>-pyrazinyl, -CH<sub>2</sub>-triazinyl, -CH<sub>2</sub>-cinnolinyl, -CH<sub>2</sub>-phthalazinyl, -CH<sub>2</sub>-quinazolinyl, -CH<sub>2</sub>-pyrimidyl, -CH<sub>2</sub>-oxetanyl, -CH<sub>2</sub>-azepinyl, -CH<sub>2</sub>-piperazinyl, -CH<sub>2</sub>-morpholinyl, -CH<sub>2</sub>-dioxanyl, -CH<sub>2</sub>-thietanyl, -CH<sub>2</sub>-oxazolyl, -(CH<sub>2</sub>)<sub>2</sub>-triazolyl, and the like.

                  “Heterocycle” means a 5- to 7-membered monocyclic, or 7- to 10-membered bicyclic, heterocyclic ring which is either saturated, unsaturated, and which

5 contains from 1 to 4 heteroatoms independently selected from nitrogen, oxygen and sulfur, and wherein the nitrogen and sulfur heteroatoms can be optionally oxidized, and the nitrogen heteroatom can be optionally quaternized, including bicyclic rings in which any of the above heterocycles are fused to a benzene ring. The heterocycle can be attached via any heteroatom or carbon atom. Heterocycles include heteroaryls as defined  
10 above. Representative heterocycles include morpholinyl, pyrrolidinonyl, pyrrolidinyl, piperidinyl, hydantoinyl, valerolactamyl, oxiranyl, oxetanyl, tetrahydrofuranyl, tetrahydropyranyl, tetrahydropyridinyl, tetrahydroprimidinyl, tetrahydrothiophenyl, tetrahydrothiopyranyl, tetrahydropyrimidinyl, tetrahydrothiophenyl, tetrahydrothiopyranyl, and the like.

15 “Heterocycle fused to phenyl” means a heterocycle, wherein heterocycle is defined as above, that is attached to a phenyl ring at two adjacent carbon atoms of the phenyl ring.

“Heterocycloalkyl” means -(alkyl)-(heterocycle), wherein alkyl and heterocycle are defined above, including -CH<sub>2</sub>-morpholinyl, -CH<sub>2</sub>-pyrrolidinonyl, -CH<sub>2</sub>-pyrrolidinyl, -CH<sub>2</sub>-piperidinyl, -CH<sub>2</sub>-hydantoinyl, -CH<sub>2</sub>-valerolactamyl, -CH<sub>2</sub>-oxiranyl, -CH<sub>2</sub>-oxetanyl, -CH<sub>2</sub>-tetrahydrofuranyl, -CH<sub>2</sub>-tetrahydropyranyl, -CH<sub>2</sub>-tetrahydropyridinyl, -CH<sub>2</sub>-tetrahydroprimidinyl, -CH<sub>2</sub>-tetrahydrothiophenyl, -CH<sub>2</sub>-tetrahydrothiopyranyl, -CH<sub>2</sub>-tetrahydropyrimidinyl, -CH<sub>2</sub>-tetrahydrothiophenyl, -CH<sub>2</sub>-tetrahydrothiopyranyl, and the like.

25 The term “substituted” as used herein means any of the above groups (*i.e.*, aryl, arylalkyl, heterocycle and heterocycloalkyl) wherein at least one hydrogen atom of the moiety being substituted is replaced with a substituent. In one embodiment, each carbon atom of the group being substituted is substituted with no more than two substituents. In another embodiment, each carbon atom of the group being substituted is substituted with no more than one substituent. In the case of a keto substituent, two  
30 hydrogen atoms are replaced with an oxygen which is attached to the carbon via a double bond. Substituents include halogen, hydroxyl, alkyl, haloalkyl, mono- or di-substituted aminoalkyl, alkyloxyalkyl, aryl, arylalkyl, heterocycle, heterocycloalkyl, -NR<sub>a</sub>R<sub>b</sub>, -NR<sub>a</sub>C(=O)R<sub>b</sub>, -NR<sub>a</sub>C(=O)NR<sub>a</sub>R<sub>b</sub>, -NR<sub>a</sub>C(=O)OR<sub>b</sub>, -NR<sub>a</sub>SO<sub>2</sub>R<sub>b</sub>, -OR<sub>a</sub>, -C(=O)R<sub>a</sub>,  
35 C(=O)OR<sub>a</sub>, -C(=O)NR<sub>a</sub>R<sub>b</sub>, -OC(=O)R<sub>a</sub>, -OC(=O)OR<sub>a</sub>, -OC(=O)NR<sub>a</sub>R<sub>b</sub>, -NR<sub>a</sub>SO<sub>2</sub>R<sub>b</sub>, or a

- 5 radical of the formula -Y-Z-R<sub>a</sub> where Y is alkanediyl, or a direct bond, Z is -O-, -S-,  
-N(R<sub>b</sub>)-, -C(=O)-, -C(=O)O-, -OC(=O)-, -N(R<sub>b</sub>)C(=O)-, -C(=O)N(R<sub>b</sub>)- or a direct bond,  
wherein R<sub>a</sub> and R<sub>b</sub> are the same or different and independently hydrogen, amino, alkyl,  
haloalkyl, aryl, arylalkyl, heterocycle, or heterocyclealkyl, or wherein R<sub>a</sub> and R<sub>b</sub> taken  
together with the nitrogen atom to which they are attached form a heterocycle.
- 10 “Haloalkyl” means alkyl, wherein alkyl is defined as above, having one or  
more hydrogen atoms replaced with halogen, wherein halogen is as defined above,  
including -CF<sub>3</sub>, -CHF<sub>2</sub>, -CH<sub>2</sub>F, -CBr<sub>3</sub>, -CHBr<sub>2</sub>, -CH<sub>2</sub>Br, -CCl<sub>3</sub>, -CHCl<sub>2</sub>, -CH<sub>2</sub>Cl, -Cl<sub>3</sub>,  
-CHI<sub>2</sub>, -CH<sub>2</sub>I, -CH<sub>2</sub>-CF<sub>3</sub>, -CH<sub>2</sub>-CHF<sub>2</sub>, -CH<sub>2</sub>-CH<sub>2</sub>F, -CH<sub>2</sub>-CBr<sub>3</sub>, -CH<sub>2</sub>-CHBr<sub>2</sub>, -CH<sub>2</sub>-  
CH<sub>2</sub>Br, -CH<sub>2</sub>-CCl<sub>3</sub>, -CH<sub>2</sub>-CHCl<sub>2</sub>, -CH<sub>2</sub>-CH<sub>2</sub>Cl, -CH<sub>2</sub>-Cl<sub>3</sub>, -CH<sub>2</sub>-CHI<sub>2</sub>, -CH<sub>2</sub>-CH<sub>2</sub>I, and  
15 the like.
- “Hydroxyalkyl” means alkyl, wherein alkyl is as defined above, having  
one or more hydrogen atoms replaced with hydroxy, including -CH<sub>2</sub>OH, -CH<sub>2</sub>CH<sub>2</sub>OH,  
-(CH<sub>2</sub>)<sub>2</sub>CH<sub>2</sub>OH, -(CH<sub>2</sub>)<sub>3</sub>CH<sub>2</sub>OH, -(CH<sub>2</sub>)<sub>4</sub>CH<sub>2</sub>OH, -(CH<sub>2</sub>)<sub>5</sub>CH<sub>2</sub>OH, -CH(OH)-CH<sub>3</sub>,  
-CH<sub>2</sub>CH(OH)CH<sub>3</sub>, and the like.
- 20 “Hydroxy” means -OH.
- “Sulfonyl” means -SO<sub>3</sub>H.
- “Sulfonylalkyl” means -SO<sub>2</sub>-(alkyl), wherein alkyl is defined above,  
including -SO<sub>2</sub>-CH<sub>3</sub>, -SO<sub>2</sub>-CH<sub>2</sub>CH<sub>3</sub>, -SO<sub>2</sub>-(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -SO<sub>2</sub>-(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -SO<sub>2</sub>-  
(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -SO<sub>2</sub>-(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.
- 25 “Sulfinylalkyl” means -SO-(alkyl), wherein alkyl is defined above,  
including -SO-CH<sub>3</sub>, -SO-CH<sub>2</sub>CH<sub>3</sub>, -SO-(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -SO-(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -SO-(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>,  
-SO-(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.
- “Sulfonamidoalkyl” means -NHSO<sub>2</sub>-(alkyl), wherein alkyl is defined  
above, including -NHSO<sub>2</sub>-CH<sub>3</sub>, -NHSO<sub>2</sub>-CH<sub>2</sub>CH<sub>3</sub>, -NHSO<sub>2</sub>-(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -NHSO<sub>2</sub>-  
30 (CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -NHSO<sub>2</sub>-(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -NHSO<sub>2</sub>-(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and the like.
- “Thioalkyl” means -S-(alkyl), wherein alkyl is defined above, including  
-S-CH<sub>3</sub>, -S-CH<sub>2</sub>CH<sub>3</sub>, -S-(CH<sub>2</sub>)<sub>2</sub>CH<sub>3</sub>, -S-(CH<sub>2</sub>)<sub>3</sub>CH<sub>3</sub>, -S-(CH<sub>2</sub>)<sub>4</sub>CH<sub>3</sub>, -S-(CH<sub>2</sub>)<sub>5</sub>CH<sub>3</sub>, and  
the like.

As used herein, the term “JNK Inhibitor” encompasses, but is not limited  
35 to, compounds disclosed herein. Without being limited by theory, specific JNK

5 Inhibitors are capable of inhibiting the activity of JNK *in vitro* or *in vivo*. The JNK  
Inhibitor can be in the form of a pharmaceutically acceptable salt, free base, solvate,  
hydrate, stereoisomer, clathrate or prodrug thereof. Such inhibitory activity can be  
determined by an assay or animal model well-known in the art including those set forth  
in Section 5.2. In one embodiment, the JNK Inhibitor is a compound of structure (I)-  
10 (III).

As used herein, a “Stent of the Invention” means any device useful for  
opening up an artery, vein or capillary thereby improving blood flow; keeping an artery,  
vein or capillary open; sealing any tears or openings in an artery, vein or capillary;  
preventing an artery, vein or capillary wall from collapsing or closing off again; or  
15 preventing small pieces of plaque from breaking off. In one embodiment, the stent is a  
stent graft.

As used herein, a “stent graft” means any stent that is covered with a  
synthetic or natural material to form a graft prosthesis. The term also encompasses  
grafted stents, wherein the stent is covered in its entirety with a natural or synthetic graft  
20 material (*e.g.*, Vanguard-graft stent, Palmaz-Impragraft stent or Corvita stent). In one  
embodiment, the stent graft is a prosthetic.

An “effective amount” when used in connection with a JNK Inhibitor is  
an amount of the JNK Inhibitor that is useful for treating or preventing a cardiovascular  
or renal disease.

25 An “effective amount” when used in connection with another active agent  
is an amount of the other active agent that is useful for providing the agent’s therapeutic  
or prophylactic effect while the JNK Inhibitor is exerting its therapeutic or prophylactic  
effect.

When coated, the coating can be present on any portion of a surface of the  
30 stent. In one embodiment, the surface is the inner surface. In another embodiment, the  
surface is the outer surface. In one embodiment, the layer covers at least about 10% of  
the surface. In another embodiment, the layer covers at least about 20% of the surface.  
In another embodiment, the layer covers at least about 30% of the surface. In another  
embodiment, the layer covers at least about 40% of the surface. In another embodiment,  
35 the layer covers at least about 50% of the surface. In another embodiment, the layer

5 covers at least about 60% of the surface. In another embodiment, the layer covers at least about 70% of the surface. In another embodiment, the layer covers at least about 80% of the surface. In another embodiment, the layer covers at least about 90% of the surface. In another embodiment, the layer covers about 100% of the surface.

As used herein, the term “preventing” includes inhibiting a cardiovascular  
10 or renal disease, in particular, atherosclerosis, stenosis or restinosis or a symptom of atherosclerosis, stenosis or restinosis.

As used herein, the term “treating” includes eradicating a cardiovascular or renal disease, in particular, atherosclerosis, stenosis or restinosis or a symptom of atherosclerosis, stenosis or restinosis. In one embodiment, “treating” refers to  
15 minimizing the spread or minimizing the worsening of a cardiovascular or renal disease, in particular, atherosclerosis, stenosis or restinosis or a symptom of atherosclerosis, stenosis or restinosis.

“JNK” means a protein or an isoform thereof expressed by a JNK 1, JNK 2, or JNK 3 gene (Gupta, S., Barrett, T., Whitmarsh, A.J., Cavanagh, J., Sluss, H.K., Derijard, B. and Davis, R.J. *The EMBO J.* 15:2760-2770 (1996)).  
20

As used herein, the term “pharmaceutically acceptable salt(s)” refers to a salt prepared from a pharmaceutically acceptable non-toxic acid or base including an inorganic acid and base and an organic acid and base. Suitable pharmaceutically acceptable base addition salts of the JNK Inhibitor include, but are not limited to metallic  
25 salts made from aluminum, calcium, lithium, magnesium, potassium, sodium and zinc or organic salts made from lysine, N,N'-dibenzylethylenediamine, chlorprocaine, choline, diethanolamine, ethylenediamine, meglumine (N-methylglucamine) and procaine. Suitable non-toxic acids include, but are not limited to, inorganic and organic acids such as acetic, alginic, anthranilic, benzenesulfonic, benzoic, camphorsulfonic, citric,  
30 ethenesulfonic, formic, fumaric, furoic, galacturonic, gluconic, glucuronic, glutamic, glycolic, hydrobromic, hydrochloric, isethionic, lactic, maleic, malic, mandelic, methanesulfonic, mucic, nitric, pamoic, pantothenic, phenylacetic, phosphoric, propionic, salicylic, stearic, succinic, sulfanilic, sulfuric, tartaric acid, and p-toluenesulfonic acid. Specific non-toxic acids include hydrochloric, hydrobromic,  
35 phosphoric, sulfuric, and methanesulfonic acids. Examples of specific salts thus include

5 hydrochloride and mesylate salts. Others are well-known in the art, see for example, *Remington's Pharmaceutical Sciences*, 18<sup>th</sup> eds., Mack Publishing, Easton PA (1990) or *Remington: The Science and Practice of Pharmacy*, 19<sup>th</sup> eds., Mack Publishing, Easton PA (1995).

As used herein, the term "polymorph(s)" and related terms herein refer to  
10 solid forms of the JNK Inhibitor having different physical properties as a result of the order of the molecules in the crystal lattice. The differences in physical properties exhibited by solid forms affect pharmaceutical parameters such as storage stability, compressibility and density (important in formulation and product manufacturing), and dissolution rates (an important factor in determining bioavailability). Differences in  
15 stability can result from changes in chemical reactivity (*e.g.*, differential oxidation, such that a dosage form discolors more rapidly when comprised of one solid form than when comprised of another solid form) or mechanical changes (*e.g.*, tablets crumble on storage as a kinetically favored polymorph converts to thermodynamically more stable solid form) or both (*e.g.*, tablets of one solid form are more susceptible to breakdown at high  
20 humidity). As a result of solubility/dissolution differences, in the extreme case, some solid form transitions may result in lack of potency or, at the other extreme, toxicity. In addition, the physical properties of the crystal may be important in processing, for example, one solid form might be more likely to form solvates or might be difficult to filter and wash free of impurities (*i.e.*, particle shape and size distribution might be  
25 different between one solid form relative to the other).

As used herein and unless otherwise indicated, the term "clathrate" means a JNK Inhibitor, or a salt thereof, in the form of a crystal lattice that contains spaces (*e.g.*, channels) that have a guest molecule (*e.g.*, a solvent or water) trapped within.

As used herein and unless otherwise indicated, the term "hydrate" means  
30 a JNK Inhibitor, or a salt thereof, that further includes a stoichiometric or non-stoichiometric amount of water bound by non-covalent intermolecular forces.

As used herein and unless otherwise indicated, the term "prodrug" means a JNK Inhibitor derivative that can hydrolyze, oxidize, or otherwise react under biological conditions (*in vitro* or *in vivo*) to provide an active compound, particularly a  
35 JNK Inhibitor. Examples of prodrugs include, but are not limited to, derivatives and

5 metabolites of a JNK Inhibitor that include biohydrolyzable moieties such as  
biohydrolyzable amides, biohydrolyzable esters, biohydrolyzable carbamates,  
biohydrolyzable carbonates, biohydrolyzable ureides, and biohydrolyzable phosphate  
analogues. Preferably, prodrugs of compounds with carboxyl functional groups are the  
lower alkyl esters of the carboxylic acid. The carboxylate esters are conveniently formed  
10 by esterifying any of the carboxylic acid moieties present on the molecule. Prodrugs can  
typically be prepared using well-known methods, such as those described by *Burger's  
Medicinal Chemistry and Drug Discovery* 6<sup>th</sup> ed. (Donald J. Abraham *ed.*, 2001, Wiley)  
and *Design and Application of Prodrugs* (H. Bundgaard *ed.*, 1985, Harwood Academic  
Publishers Gmhf).

15 As used herein and unless otherwise indicated, the term "stereoisomer" or  
"stereomerically pure" means one stereoisomer of a JNK Inhibitor that is substantially  
free of other stereoisomers of that compound. For example, a stereomerically pure  
compound having one chiral center will be substantially free of the opposite enantiomer  
of the compound. A stereomerically pure a compound having two chiral centers will be  
20 substantially free of other diastereomers of the compound. A typical stereomerically  
pure compound comprises greater than about 80% by weight of one stereoisomer of the  
compound and less than about 20% by weight of other stereoisomers of the compound,  
more preferably greater than about 90% by weight of one stereoisomer of the compound  
and less than about 10% by weight of the other stereoisomers of the compound, even  
25 more preferably greater than about 95% by weight of one stereoisomer of the compound  
and less than about 5% by weight of the other stereoisomers of the compound, and most  
preferably greater than about 97% by weight of one stereoisomer of the compound and  
less than about 3% by weight of the other stereoisomers of the compound.

#### 4. DETAILED DESCRIPTION OF THE INVENTION

30 In one embodiment, the present invention encompasses a Stent of the  
Invention useful for treating or preventing a cardiovascular or renal disease.

In another embodiment, the present invention encompasses methods for  
treating or preventing a cardiovascular or renal disease, including atherosclerosis, and in

5 particular, the treatment or prevention of restenosis after vascular intervention such as angioplasty, comprising implanting into a patient in need thereof a Stent of the Invention.

In another embodiment, the present invention encompasses a method for making a Stent of the Invention, comprising the step of coating a stent with an effective amount of a JNK Inhibitor. The coating step can include dipping, spraying, casting,  
10 layering, adding to or filling a stent with an effective amount of one or more JNK Inhibitors.

In another embodiment, the present invention encompasses a method for making a Stent of the Invention, comprising the step of manufacturing a stent using a material having an effective amount of a JNK Inhibitor incorporated therein.

15 In another embodiment, the Stent of the Invention further comprise an effective amount of another active agent useful for treating or preventing a cardiovascular or renal disease. Such active agents include, but are not limited to: an anticoagulant agent, an antimetabolite agent, an anti-inflammatory agent, an antiplatelet agent, an antithrombin agent, an antimitotic agent, a cytostatic agent and an  
20 antiproliferative agent (see Section 4.5 for further examples of other active agents).

In another embodiment, the Stent of the Invention further comprise nitric oxide.

In another embodiment, the Stent of the Invention further comprise an antibiotic agent or an antiviral agent, or mixtures thereof, which can prevent graft  
25 rejection.

In one embodiment, the coating comprises a plurality of layers.

In one embodiment, the coating is a controlled-release coating.

In one embodiment, the Stent of the Invention is comprised of material which allows for controlled-release of the JNK Inhibitor incorporated therein.

30 In another embodiment, the present invention encompasses a kit comprising a Stent of the Invention and directions for its use.

#### **4.1 ILLUSTRATIVE JNK INHIBITORS**

As mentioned above, the present invention is directed to methods useful for treating or preventing a cardiovascular or renal disease, comprising implanting into a

5 patient in need thereof a Stent of the Invention (*i.e.*, a stent comprising an effective amount of a JNK Inhibitor). Illustrative JNK Inhibitors are set forth below.

In one embodiment, the JNK Inhibitor has the following structure (I):

wherein:

10 A is a direct bond,  $-(CH_2)_a-$ ,  $-(CH_2)_bCH=CH(CH_2)_c-$ , or  $-(CH_2)_bC \equiv C(CH_2)_c-$ ;

$R_1$  is aryl, heteroaryl or heterocycle fused to phenyl, each being optionally substituted with one to four substituents independently selected from  $R_3$ ;

15  $R_2$  is  $-R_3$ ,  $-R_4$ ,  $-(CH_2)_bC(=O)R_5$ ,  $-(CH_2)_bC(=O)OR_5$ ,  $-(CH_2)_bC(=O)NR_5R_6$ ,  $-(CH_2)_bC(=O)NR_5(CH_2)_cC(=O)R_6$ ,  $-(CH_2)_bNR_5C(=O)R_6$ ,  $-(CH_2)_bNR_5C(=O)NR_6R_7$ ,  $-(CH_2)_bNR_5R_6$ ,  $-(CH_2)_bOR_5$ ,  $-(CH_2)_bSO_dR_5$  or  $-(CH_2)_bSO_2NR_5R_6$ ;

$a$  is 1, 2, 3, 4, 5 or 6;

20  $b$  and  $c$  are the same or different and at each occurrence independently selected from 0, 1, 2, 3 or 4;

$d$  is at each occurrence 0, 1 or 2;

25  $R_3$  is at each occurrence independently halogen, hydroxy, carboxy, alkyl, alkoxy, haloalkyl, acyloxy, thioalkyl, sulfinylalkyl, sulfonylalkyl, hydroxyalkyl, aryl, arylalkyl, heterocycle, heterocycloalkyl,  $-C(=O)OR_8$ ,  $-OC(=O)R_8$ ,  $-C(=O)NR_8R_9$ ,  $-C(=O)NR_8OR_9$ ,  $-SO_2NR_8R_9$ ,  $-NR_8SO_2R_9$ ,  $-CN$ ,  $-NO_2$ ,  $-NR_8R_9$ ,  $-NR_8C(=O)R_9$ ,  $-NR_8C(=O)(CH_2)_bOR_9$ ,  $-NR_8C(=O)(CH_2)_bR_9$ ,  $-O(CH_2)_bNR_8R_9$ , or heterocycle fused to phenyl;

30  $R_4$  is alkyl, aryl, arylalkyl, heterocycle or heterocycloalkyl, each being optionally substituted with one to four substituents independently selected from  $R_3$ , or  $R_4$  is halogen or hydroxy;

5 R<sub>5</sub>, R<sub>6</sub> and R<sub>7</sub> are the same or different and at each occurrence independently hydrogen, alkyl, aryl, arylalkyl, heterocycle or heterocycloalkyl, wherein each of R<sub>5</sub>, R<sub>6</sub> and R<sub>7</sub> are optionally substituted with one to four substituents independently selected from R<sub>3</sub>; and

R<sub>8</sub> and R<sub>9</sub> are the same or different and at each occurrence independently  
10 hydrogen, alkyl, aryl, arylalkyl, heterocycle, or heterocycloalkyl, or R<sub>8</sub> and R<sub>9</sub> taken together with the atom or atoms to which they are bonded form a heterocycle, wherein each of R<sub>8</sub>, R<sub>9</sub>, and R<sub>8</sub> and R<sub>9</sub> taken together to form a heterocycle are optionally substituted with one to four substituents independently selected from R<sub>3</sub>.

In one embodiment, -A-R<sub>1</sub> is phenyl, optionally substituted with one to  
15 four substituents independently selected from halogen, alkoxy, -NR<sub>8</sub>C(=O)R<sub>9</sub>, -C(=O)NR<sub>8</sub>R<sub>9</sub>, and -O(CH<sub>2</sub>)<sub>b</sub>NR<sub>8</sub>R<sub>9</sub>, wherein *b* is 2 or 3 and wherein R<sub>8</sub> and R<sub>9</sub> are defined above.

In another embodiment, R<sub>2</sub> is -R<sub>4</sub>, -(CH<sub>2</sub>)<sub>b</sub>C(=O)R<sub>5</sub>, -(CH<sub>2</sub>)<sub>b</sub>C(=O)OR<sub>5</sub>,  
-(CH<sub>2</sub>)<sub>b</sub>C(=O)NR<sub>5</sub>R<sub>6</sub>, -(CH<sub>2</sub>)<sub>b</sub>C(=O)NR<sub>5</sub>(CH<sub>2</sub>)<sub>c</sub>C(=O)R<sub>6</sub>, -(CH<sub>2</sub>)<sub>b</sub>NR<sub>5</sub>C(=O)R<sub>6</sub>,  
20 -(CH<sub>2</sub>)<sub>b</sub>NR<sub>5</sub>C(=O)NR<sub>6</sub>R<sub>7</sub>, -(CH<sub>2</sub>)<sub>b</sub>NR<sub>5</sub>R<sub>6</sub>, -(CH<sub>2</sub>)<sub>b</sub>OR<sub>5</sub>, -(CH<sub>2</sub>)<sub>b</sub>SO<sub>d</sub>R<sub>5</sub> or  
-(CH<sub>2</sub>)<sub>b</sub>SO<sub>2</sub>NR<sub>5</sub>R<sub>6</sub>, and *b* is an integer ranging from 0-4.

In another embodiment, R<sub>2</sub> is -(CH<sub>2</sub>)<sub>b</sub>C(=O)NR<sub>5</sub>R<sub>6</sub>, -(CH<sub>2</sub>)<sub>b</sub>NR<sub>5</sub>C(=O)R<sub>6</sub>,  
3-triazolyl or 5-tetrazolyl, wherein *b* is 0 and wherein R<sub>8</sub> and R<sub>9</sub> are defined above.

In another embodiment, R<sub>2</sub> is 3-triazolyl or 5-tetrazolyl.

25 In another embodiment:

(a) -A-R<sub>1</sub> is phenyl, optionally substituted with one to four substituents independently selected from halogen, alkoxy, -NR<sub>8</sub>C(=O)R<sub>9</sub>, -C(=O)NR<sub>8</sub>R<sub>9</sub>,  
and -O(CH<sub>2</sub>)<sub>b</sub>NR<sub>8</sub>R<sub>9</sub>, wherein *b* is 2 or 3; and

(b) R<sub>2</sub> is -(CH<sub>2</sub>)<sub>b</sub>C(=O)NR<sub>5</sub>R<sub>6</sub>, -(CH<sub>2</sub>)<sub>b</sub>NR<sub>5</sub>C(=O)R<sub>6</sub>, 3-triazolyl or 5-  
30 tetrazolyl, wherein *b* is 0 and wherein R<sub>8</sub> and R<sub>9</sub> are defined above.

In another embodiment:

(a) -A-R<sub>1</sub> is phenyl, optionally substituted with one to four substituents independently selected from halogen, alkoxy, -NR<sub>8</sub>C(=O)R<sub>9</sub>, -C(=O)NR<sub>8</sub>R<sub>9</sub>, and  
-O(CH<sub>2</sub>)<sub>b</sub>NR<sub>8</sub>R<sub>9</sub>, wherein *b* is 2 or 3; and

35 (b) R<sub>2</sub> is 3-triazolyl or 5-tetrazolyl.

5 In another embodiment,  $R_2$  is  $R_4$ , and  $R_4$  is 3-triazolyl, optionally substituted at its 5-position with:

- (a) a  $C_1$ - $C_4$  straight or branched chain alkyl group optionally substituted with a hydroxyl, methylamino, dimethylamino or 1-pyrrolidinyl group; or
- (b) a 2-pyrrolidinyl group.

10 In another embodiment,  $R_2$  is  $R_4$ , and  $R_4$  is 3-triazolyl, optionally substituted at its 5-position with: methyl, n-propyl, isopropyl, 1-hydroxyethyl, 3-hydroxypropyl, methylaminomethyl, dimethylaminomethyl, 1-(dimethylamino)ethyl, 1-pyrrolidinylmethyl or 2-pyrrolidinyl.

In another embodiment, the compounds of structure (I) have structure  
15 (IA) when A is a direct bond, or have structure (IB) when A is  $-(CH_2)_a-$ :

In other embodiments, the compounds of structure (I) have structure (IC) when A is a  $-(CH_2)_bCH=CH(CH_2)_c-$ , and have structure (ID) when A is  $-(CH_2)_bC\equiv C(CH_2)_c-$ :

20

In further embodiments of this invention,  $R_1$  of structure (I) is aryl or substituted aryl, such as phenyl or substituted phenyl as represented by the following structure (IE):

5

In another embodiment,  $R_2$  of structure (I) is  $-(CH_2)_bNR_4(C=O)R_5$ . In one aspect of this embodiment,  $b = 0$  and the compounds have the following structure (IF):

Representative  $R_2$  groups of the compounds of structure (I) include alkyl (such as methyl and ethyl), halo (such as chloro and fluoro), haloalkyl (such as trifluoromethyl), hydroxy, alkoxy (such as methoxy and ethoxy), amino, arylalkyloxy (such as benzyloxy), mono- or di-alkylamine (such as  $-NHCH_3$ ,  $-N(CH_3)_2$  and  $-NHCH_2CH_3$ ),  $-NHC(=O)R_4$  wherein  $R_6$  is a substituted or unsubstituted phenyl or heteroaryl (such as phenyl or heteroaryl substituted with hydroxy, carboxy, amino, ester, alkoxy, alkyl, aryl, haloalkyl, halo,  $-CONH_2$  and  $-CONH$  alkyl),  $-NH$ (heteroarylalkyl) (such as  $-NHCH_2$ (3-pyridyl),  $-NHCH_2$ (4-pyridyl), heteroaryl (such as pyrazolo, triazolo and tetrazolo),  $-C(=O)NHR_6$  wherein  $R_6$  is hydrogen, alkyl, or as defined above (such as  $-C(=O)NH_2$ ,  $-C(=O)NHCH_3$ ,  $-C(=O)NH$ (H-carboxyphenyl),  $-C(=O)N(CH_3)_2$ ), arylalkenyl (such as phenylvinyl, 3-nitrophenylvinyl, 4-carboxyphenylvinyl), heteroarylalkenyl (such as 2-pyridylvinyl, 4-pyridylvinyl).

Representative  $R_3$  groups of the compounds of structure (I) include halogen (such as chloro and fluoro), alkyl (such as methyl, ethyl and isopropyl), haloalkyl (such as trifluoromethyl), hydroxy, alkoxy (such as methoxy, ethoxy, n-propyloxy and isobutyloxy), amino, mono- or di-alkylamino (such as dimethylamine), aryl (such as phenyl), carboxy, nitro, cyano, sulfinylalkyl (such as methylsulfinyl), sulfonylalkyl (such as methylsulfonyl), sulfonamidoalkyl (such as  $-NHSO_2CH_3$ ),

- 5 -NR<sub>8</sub>C(=O)(CH<sub>2</sub>)<sub>b</sub>OR<sub>9</sub> (such as NHC(=O)CH<sub>2</sub>OCH<sub>3</sub>), NHC(=O)R<sub>9</sub> (such as  
-NHC(=O)CH<sub>3</sub>, -NHC(=O)CH<sub>2</sub>C<sub>6</sub>H<sub>5</sub>, -NHC(=O)(2-furanyl)), and -O(CH<sub>2</sub>)<sub>b</sub>NR<sub>8</sub>R<sub>9</sub> (such  
as -O(CH<sub>2</sub>)<sub>2</sub>N(CH<sub>3</sub>)<sub>2</sub>).

The compounds of structure (I) can be made using organic synthesis  
techniques known to those skilled in the art, as well as by the methods described in  
10 International Publication No. WO 02/10137 (particularly in Examples 1-430, at page 35,  
line 1 to page 396, line 12), published February 7, 2002, which is incorporated herein by  
reference in its entirety. Further, specific examples of these compounds are found in this  
publication.

Illustrative examples of JNK Inhibitors of structure (I) are:

15

3-(4-Fluoro-phenyl)-5-(1H-  
[1,2,4]triazol-3-yl)-1H-indazole;

3-[3-(2-Piperidin-1-yl-ethoxy)-phenyl]-5-(1H-  
[1,2,4]triazol-3-yl)-1H-indazole ;

3-(4-Fluoro-phenyl)-1H-indazole-5-carboxylic acid  
(3-morpholin-4-yl-propyl)-amide ;

5

3-[3-(3-Piperidin-1-yl-propionylamino)-phenyl]-1*H*-indazole-5-carboxylic acid amide ;

3-Benzo[1,3]dioxol-5-yl-5-(2*H*-tetrazol-5-yl)-1*H*-indazole ;

3-(4-Fluoro-phenyl)-5-(5-methyl-[1,3,4]oxadiazol-2-yl)-1*H*-indazole ;

*N*-tert-Butyl-3-[5-(1*H*-[1,2,4]triazol-3-yl)-1*H*-indazol-3-yl]-benzamide ;

3-[3-(2-Morpholin-4-yl-ethoxy)-phenyl]-5-(1*H*-[1,2,4]triazol-3-yl)-1*H*-indazole ;

5

Dimethyl-(2-{4-[5-(1*H*-[1,2,4]triazol-3-yl)-1*H*-indazol-3-yl]-phenoxy}-ethyl)-amine ;

5-[5-(1,1-Dimethyl-propyl)-1*H*-[1,2,4]triazol-3-yl]-3-(4-fluoro-phenyl)-1*H*-indazole ;

3-(4-Fluoro-phenyl)-5-(5-pyrrolidin-1-ylmethyl-1*H*-[1,2,4]triazol-3-yl)-1*H*-indazole ;

3-(6-Methoxy-naphthalen-2-yl)-5-(5-pyrrolidin-1-ylmethyl-1*H*-[1,2,4]triazol-3-yl)-1*H*-indazole ;

3-(4-Fluoro-phenyl)-1*H*-indazole-5-carboxylic acid  
amide ;

and pharmaceutically acceptable salts thereof.

In another embodiment, the JNK Inhibitor has the following structure

(II):

(II)

wherein:

$R_1$  is aryl or heteroaryl optionally substituted with one to four substituents independently selected from  $R_7$ ;

$R_2$  is hydrogen;

$R_3$  is hydrogen or lower alkyl;

$R_4$  represents one to four optional substituents, wherein each substituent is the same or different and independently selected from halogen, hydroxy, lower alkyl and lower alkoxy;

$R_5$  and  $R_6$  are the same or different and independently - $R_8$ ,

$-(CH_2)_aC(=O)R_9$ ,  $-(CH_2)_aC(=O)OR_9$ ,  $-(CH_2)_aC(=O)NR_9R_{10}$ ,

$-(CH_2)_aC(=O)NR_9(CH_2)_bC(=O)R_{10}$ ,  $-(CH_2)_aNR_9C(=O)R_{10}$ ,  $(CH_2)_aNR_{11}C(=O)NR_9R_{10}$ ,

$-(CH_2)_aNR_9R_{10}$ ,  $-(CH_2)_aOR_9$ ,  $-(CH_2)_aSO_cR_9$  or  $-(CH_2)_aSO_2NR_9R_{10}$ ;

or  $R_5$  and  $R_6$  taken together with the nitrogen atom to which they are attached to form a heterocycle or substituted heterocycle;

$R_7$  is at each occurrence independently halogen, hydroxy, cyano, nitro, carboxy, alkyl, alkoxy, haloalkyl, acyloxy, thioalkyl, sulfinylalkyl, sulfonylalkyl,

5 hydroxyalkyl, aryl, arylalkyl, heterocycle, substituted heterocycle, heterocycloalkyl,  
\_C(=O)OR<sub>8</sub>, -OC(=O)R<sub>8</sub>, -C(=O)NR<sub>8</sub>R<sub>9</sub>, -C(=O)NR<sub>8</sub>OR<sub>9</sub>, -SO<sub>c</sub>R<sub>8</sub>, -SO<sub>c</sub>NR<sub>8</sub>R<sub>9</sub>,  
-NR<sub>8</sub>SO<sub>c</sub>R<sub>9</sub>, -NR<sub>8</sub>R<sub>9</sub>, -NR<sub>8</sub>C(=O)R<sub>9</sub>, -NR<sub>8</sub>C(=O)(CH<sub>2</sub>)<sub>b</sub>OR<sub>9</sub>, -NR<sub>8</sub>C(=O)(CH<sub>2</sub>)<sub>b</sub>R<sub>9</sub>,  
\_O(CH<sub>2</sub>)<sub>b</sub>NR<sub>8</sub>R<sub>9</sub>, or heterocycle fused to phenyl;

R<sub>8</sub>, R<sub>9</sub>, R<sub>10</sub> and R<sub>11</sub> are the same or different and at each occurrence  
10 independently hydrogen, alkyl, aryl, arylalkyl, heterocycle, heterocycloalkyl;  
or R<sub>8</sub> and R<sub>9</sub> taken together with the atom or atoms to which they are  
attached to form a heterocycle;

*a* and *b* are the same or different and at each occurrence independently  
selected from 0, 1, 2, 3 or 4; and

15 *c* is at each occurrence 0, 1 or 2.

In one embodiment, R<sub>1</sub> is a substituted or unsubstituted aryl or heteroaryl.  
When R<sub>1</sub> is substituted, it is substituted with one or more substituents defined below. In  
one embodiment, when substituted, R<sub>1</sub> is substituted with a halogen, -SO<sub>2</sub>R<sub>8</sub> or  
-SO<sub>2</sub>R<sub>8</sub>R<sub>9</sub>.

20 In another embodiment, R<sub>1</sub> is substituted or unsubstituted aryl, furyl,  
benzofuranyl, thiophenyl, benzothiophenyl, quinoliny, pyrrolyl, indolyl, oxazolyl,  
benzoxazolyl, imidazolyl, benzimidazolyl, thiazolyl, benzothiazolyl, isoxazolyl,  
pyrazolyl, isothiazolyl, pyridazinyl, pyrimidinyl, pyrazinyl, triazinyl, cinnoliny,  
phthalazinyl or quinazolinyl.

25 In another embodiment R<sub>1</sub> is substituted or unsubstituted aryl or  
heteroaryl. When R<sub>1</sub> is substituted, it is substituted with one or more substituents  
defined below. In one embodiment, when substituted, R<sub>1</sub> is substituted with a halogen,  
-SO<sub>2</sub>R<sub>8</sub> or -SO<sub>2</sub>R<sub>8</sub>R<sub>9</sub>.

In another embodiment, R<sub>1</sub> is substituted or unsubstituted aryl, preferably  
30 phenyl. When R<sub>1</sub> is a substituted aryl, the substituents are defined below. In one  
embodiment, when substituted, R<sub>1</sub> is substituted with a halogen, -SO<sub>2</sub>R<sub>8</sub> or -SO<sub>2</sub>R<sub>8</sub>R<sub>9</sub>.

In another embodiment, R<sub>5</sub> and R<sub>6</sub>, taken together with the nitrogen atom  
to which they are attached form a substituted or unsubstituted nitrogen-containing non-  
aromatic heterocycle, in one embodiment, piperazinyl, piperidinyl or morpholinyl.

5                    When R<sub>5</sub> and R<sub>6</sub>, taken together with the nitrogen atom to which they are attached form substituted piperazinyl, piperadinyl or morpholinyl, the piperazinyl, piperadinyl or morpholinyl is substituted with one or more substituents defined below. In one embodiment, when substituted, the substituent is alkyl, amino, alkylamino, alkoxyalkyl, acyl, pyrrolidinyl or piperidinyl.

10                   In one embodiment, R<sub>3</sub> is hydrogen and R<sub>4</sub> is not present, and the JNK Inhibitor has the following structure (IIA):

(IIA)

and pharmaceutically acceptable salts thereof.

15                   In a more specific embodiment, R<sub>1</sub> is phenyl optionally substituted with R<sub>7</sub>, and having the following structure (IIB):

(IIB)

and pharmaceutically acceptable salts thereof.

20                   In still a further embodiment, R<sub>7</sub> is at the para position of the phenyl group relative to the pyrimidine, as represented by the following structure (IIC):

(IIC)

5 and pharmaceutically acceptable salts thereof.

The JNK Inhibitors of structure (II) can be made using organic synthesis techniques known to those skilled in the art, as well as by the methods described in International Publication No. WO 02/46170 (particularly Examples 1-27 at page 23, line 5 to page 183, line 25), published June 13, 2002, which is hereby incorporated by  
10 reference in its entirety. Further, specific examples of these compounds are found in the publication.

Illustrative examples of JNK Inhibitors of structure (II) are:

4-[4-(4-Chloro-phenyl)-pyrimidin-2-ylamino]-  
benzamide ;

4-[4-(4-Chloro-phenyl)-pyrimidin-2-ylamino]-*N,N*-dimethyl-  
benzamide ;

4-[4-(4-Chloro-phenyl)-pyrimidin-2-ylamino]-*N*-(3-piperidin-1-yl-propyl)-  
benzamide ;

15

5

{4-[4-(4-Chloro-phenyl)-pyrimidin-2-ylamino]-phenyl}-  
piperazin-1-yl-methanone ;

1-(4-{4-[4-(4-Chloro-phenyl)-pyrimidin-2-ylamino]-benzoyl}-  
piperazin-1-yl)-ethanone ;

1-[4-(4-{4-[4-(3-Hydroxy-propylsulfanyl)-phenyl]-pyrimidin-2-ylamino}-benzoyl)-  
piperazin-1-yl]-ethanone ;

{4-[4-(4-Chloro-phenyl)-pyrimidin-2-ylamino]-phenyl}-(4-pyrrolidin-1-yl-  
piperidin-1-yl)-methanone ;

and pharmaceutically acceptable salts thereof.

5

In another embodiment, the JNK Inhibitor has the following structure

(III):

(III)

wherein  $R_0$  is -O-, -S-, -S(O)-, -S(O)<sub>2</sub>-, NH or -CH<sub>2</sub>-;

the compound of structure (III) being: (i) unsubstituted, (ii)

10 monosubstituted and having a first substituent, or (iii) disubstituted and having a first substituent and a second substituent;

the first or second substituent, when present, is at the 3, 4, 5, 7, 8, 9, or 10 position, wherein the first and second substituent, when present, are independently alkyl, hydroxy, halogen, nitro, trifluoromethyl, sulfonyl, carboxyl, alkoxycarbonyl, alkoxy, 15 aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy, alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono-alkylaminoalkoxy, di-alkylaminoalkoxy, or a group represented by structure (a), (b), (c), (d), (e), or (f):

20

5                    wherein R<sub>3</sub> and R<sub>4</sub> are taken together and represent alkylidene or a heteroatom-containing cyclic alkylidene or R<sub>3</sub> and R<sub>4</sub> are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, aryloxyalkyl, alkoxyalkyl, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl; and

                    R<sub>5</sub> is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, alkoxy, 10 alkoxyalkyl, alkoxycarbonylalkyl, amino, mono-alkylamino, di-alkylamino, arylamino, arylalkylamino, cycloalkylamino, cycloalkylalkylamino, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl.

                    In another embodiment, the JNK Inhibitor has the following structure

(IIIA):

2H-Dibenzo[cd,g]indol-6-one  
(IIIA)

                    being: (i) unsubstituted, (ii) monosubstituted and having a first substituent, or (iii) disubstituted and having a first substituent and a second substituent; the first or second substituent, when present, is at the 3, 4, 5, 7, 8, 9, or 10 20 position;

                    wherein the first and second substituent, when present, are independently alkyl, hydroxy, halogen, nitro, trifluoromethyl, sulfonyl, carboxyl, alkoxycarbonyl, alkoxy, aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy, alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono- alkylaminoalkoxy, di- 25 alkylaminoalkoxy, or a group represented by structure (a), (b), (c), (d), (e), or (f):

5

wherein  $\text{R}_3$  and  $\text{R}_4$  are taken together and represent alkylidene or a heteroatom-containing cyclic alkylidene or  $\text{R}_3$  and  $\text{R}_4$  are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, aryloxyalkyl, alkoxyalkyl, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl; and

10

$\text{R}_5$  is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, alkoxy, alkoxyalkyl, alkoxycarbonylalkyl, amino, mono-alkylamino, di-alkylamino, arylamino, arylalkylamino, cycloalkylamino, cycloalkylalkylamino, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl.

15

A subclass of the compounds of structure (IIIA) is that wherein the first or second substituent is present at the 5, 7, or 9 position. In one embodiment, the first or second substituent is present at the 5 or 7 position.

A second subclass of compounds of structure (IIIA) is that wherein the first or second substituent is present at the 5, 7, or 9 position;

20

the first or second substituent is independently alkoxy, aryloxy, aminoalkyl, mono-alkylaminoalkyl, di-alkylaminoalkyl, or a group represented by the structure (a), (c), (d), (e), or (f);

$\text{R}_3$  and  $\text{R}_4$  are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, or cycloalkylalkyl; and

$\text{R}_5$  is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, or cycloalkylalkyl.

5

In another embodiment, the JNK Inhibitor has the following structure

(IIIB):

2-Oxo-2H-21<sup>4</sup>-anthra[9,1-cd]  
isothiazol-6-one  
(IIIB)

being (i) unsubstituted, (ii) monosubstituted and having a first substituent,  
or (ii) disubstituted and having a first substituent and a second substituent;

10 the first or second substituent, when present, is at the 3, 4, 5, 7, 8, 9, or 10  
position;

wherein the first and second substituent, when present, are independently  
alkyl, halogen, hydroxy, nitro, trifluoromethyl, sulfonyl, carboxyl, alkoxycarbonyl,  
alkoxy, aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy,  
15 alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono-alkylaminoalkoxy, di-alkylaminoalkoxy,  
or a group represented by structure (a), (b) (c), (d), (e), or (f):

5                    wherein R<sub>3</sub> and R<sub>4</sub> are taken together and represent alkylidene or a heteroatom-containing cyclic alkylidene or R<sub>3</sub> and R<sub>4</sub> are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, aryloxyalkyl, alkoxyalkyl, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl; and

                    R<sub>5</sub> is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, alkoxy, 10 alkoxyalkyl, alkoxycarbonylalkyl, amino, mono-alkylamino, di-alkylamino, arylamino, arylalkylamino, cycloalkylamino, cycloalkylalkylamino, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl.

                    A subclass of the compounds of structure (IIIB) is that wherein the first or second substituent is present at the 5, 7, or 9 position. In one embodiment, the first or 15 second substituent is present at the 5 or 7 position.

                    A second subclass of the compounds of structure (IIIB) is that wherein the first or second substituent is independently alkoxy, aryloxy, or a group represented by the structure (a), (c), (d), (e), or (f);

                    R<sub>3</sub> and R<sub>4</sub> are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, or 20 cycloalkylalkyl; and

                    R<sub>5</sub> is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, or cycloalkylalkyl.

                    In another embodiment, the JNK Inhibitor has the following structure (IIIC):

2-Oxa-1-aza-aceanthrylen-6-one  
(IIIC)

25                    being (i) monosubstituted and having a first substituent or (ii) disubstituted and having a first substituent and a second substituent;

                    the first or second substituent, when present, is at the 3, 4, 5, 7, 8, 9, or 10 position;

5 wherein the first and second substituent, when present, are independently alkyl, halogen, hydroxy, nitro, trifluoromethyl, sulfonyl, carboxyl, alkoxycarbonyl, alkoxy, aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy, alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono-alkylaminoalkoxy, di-alkylaminoalkoxy, or a group represented by structure (a), (b), (c) (d), (e), or (f):

10

wherein  $R_3$  and  $R_4$  are taken together and represent alkylidene or a heteroatom-containing cyclic alkylidene or  $R_3$  and  $R_4$  are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, aryloxyalkyl, alkoxyalkyl, aminoalkyl, 15 mono-alkylaminoalkyl, or di-alkylaminoalkyl; and

$R_5$  is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, alkoxy, alkoxyalkyl, alkoxycarbonylalkyl, amino, mono-alkylamino, di-alkylamino, arylamino, arylalkylamino, cycloalkylamino, cycloalkylalkylamino, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl.

20 A subclass of the compounds of structure (IIIC) is that wherein the first or second substituent is present at the 5, 7, or 9 position. In one embodiment, the first or second substituent is present at the 5 or 7 position.

A second subclass of the compounds of structure (IIIC) is that wherein the first or second substituent is independently alkoxy, aryloxy, aminoalkyl, mono-

5 alkylaminoalkyl, di-alkylaminoalkyl, or a group represented by the structure (a), (c), (d), (e), or (f);

R<sub>3</sub> and R<sub>4</sub> are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, or cycloalkylalkyl; and

R<sub>5</sub> is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, or cycloalkylalkyl.

10 In another embodiment, the JNK Inhibitor has the following structure (IIID):

2,2-Dioxo-2*H*-21<sup>6</sup>-anthra  
[9,1-*cd*]isothiazol-6-one  
(IIID)

being (i) monosubstituted and having a first substituent present at the 5, 7, or 9 position, (ii) disubstituted and having a first substituent present at the 5 position and a second substituent present at the 7 position, (iii) disubstituted and having a first substituent present at the 5 position and a second substituent present at the 9 position, or  
15 (iv) disubstituted and having a first substituent present at the 7 position and a second substituent present at the 9 position;

wherein the first and second substituent, when present, are independently  
20 alkyl, halogen, hydroxy, nitro, trifluoromethyl, sulfonyl, carboxyl, alkoxy, aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy, alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono-alkylaminoalkoxy, di-alkylaminoalkoxy, or a group represented by structure (a), (b), (c), (d), (e), or (f):

5

wherein  $\text{R}_3$  and  $\text{R}_4$  are taken together and represent alkylidene or a heteroatom-containing cyclic alkylidene or  $\text{R}_3$  and  $\text{R}_4$  are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, aryloxyalkyl, alkoxyalkyl, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl; and

10

$\text{R}_5$  is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, alkoxy, alkoxyalkyl, alkoxycarbonylalkyl, amino, mono-alkylamino, di-alkylamino, arylamino, arylalkylamino, cycloalkylamino, cycloalkylalkylamino, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl.

15

A subclass of the compounds of structure (IIID) is that wherein the first or second substituent is present at the 5 or 7 position.

20

A second subclass of the compounds of structure (IIID) is that wherein the first or second substituent is independently alkyl, trifluoromethyl, sulfonyl, carboxyl, alkoxycarbonyl, alkoxy, aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy, alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono-alkylaminoalkoxy, di-alkylaminoalkoxy, or a group represented by structure (a), (c), (d), (e), or (f).

Another subclass of the compounds of structure (IIID) is that wherein the first and second substituent are independently alkoxy, aryloxy, or a group represented by the structure (a), (c), (d), (e), or (f);

5                     $R_3$  and  $R_4$  are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, or cycloalkylalkyl; and

$R_5$  is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, alkoxycarbonyl, or cycloalkylalkyl.

In another embodiment, the JNK Inhibitor has the following structure

10 (IIIE):

Anthra[9,1-*cd*]isothiazol-6-one  
(IIIE)

being (i) monosubstituted and having a first substituent present at the 5, 7, or 9 position, (ii) disubstituted and having a first substituent present at the 5 position and a second substituent present at the 9 position, (iii) disubstituted and having a first substituent present at the 7 position and a second substituent present at the 9 position, or  
15 (iv) disubstituted and having a first substituent present at the 5 position and a second substituent present at the 7 position;

wherein the first and second substituent, when present, are independently alkyl, halogen, hydroxy, nitro, trifluoromethyl, sulfonyl, carboxyl, alkoxycarbonyl,  
20 alkoxy, aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy, alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono-alkylaminoalkoxy, di-alkylaminoalkoxy, or a group represented by structure (a), (b), (c), (d), (e), or (f):

5

wherein  $\text{R}_3$  and  $\text{R}_4$  are taken together and represent alkylidene or a heteroatom-containing cyclic alkylidene or  $\text{R}_3$  and  $\text{R}_4$  are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, aryloxyalkyl, alkoxyalkyl, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl; and

10

$\text{R}_5$  is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, alkoxy, alkoxyalkyl, alkoxycarbonylalkyl, amino, mono-alkylamino, di-alkylamino, arylamino, arylalkylamino, cycloalkylamino, cycloalkylalkylamino, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl.

15

A subclass of the compounds of structure (IIIE) is that wherein the first or second substituent is present at the 5 or 7 position.

A second subclass of the compounds of structure (IIIE) is that wherein the compound of structure (IIIE) is disubstituted and at least one of the substituents is a group represented by the structure (d) or (f).

20

Another subclass of the compounds of structure (IIIE) is that wherein the compounds are monosubstituted. Yet another subclass of compounds is that wherein the compounds are monosubstituted at the 5 or 7 position with a group represented by the structure (e) or (f).

In another embodiment, the JNK Inhibitor has the following structure (IIIF):

2H-Dibenzo[*cd,g*]indazol-6-one  
(IIIF)

5

being (i) unsubstituted, (ii) monosubstituted and having a first substituent, or (iii) disubstituted and having a first substituent and a second substituent;

the first or second substituent, when present, is at the 3, 4, 5, 7, 8, 9, or 10 position;

10

wherein the first and second substituent, when present, are independently alkyl, hydroxy, halogen, nitro, trifluoromethyl, sulfonyl, carboxyl, alkoxycarbonyl, alkoxy, aryl, aryloxy, arylalkyloxy, arylalkyl, cycloalkylalkyloxy, cycloalkyloxy, alkoxyalkyl, alkoxyalkoxy, aminoalkoxy, mono- alkylaminoalkoxy, di-alkylaminoalkoxy, or a group represented by structure (a), (b), (c), (d), (e), or (f):

(a)

(b)

(c)

(d)

(e)

(f)

15

wherein R<sub>3</sub> and R<sub>4</sub> are taken together and represent alkylidene or a heteroatom-containing cyclic alkylidene or R<sub>3</sub> and R<sub>4</sub> are independently hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, aryloxyalkyl, alkoxyalkyl, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl; and

5                   R<sub>5</sub> is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl, alkoxy, alkoxyalkyl, alkoxycarbonylalkyl, amino, mono-alkylamino, di-alkylamino, arylamino, arylalkylamino, cycloalkylamino, cycloalkylalkylamino, aminoalkyl, mono-alkylaminoalkyl, or di-alkylaminoalkyl.

10                   In one embodiment, the compound of structure (IIIF), or a pharmaceutically acceptable salt thereof is unsubstituted at the 3, 4, 5, 7, 8, 9, or 10 position.

                  The JNK Inhibitors of structure (III) can be made using organic synthesis techniques known to those skilled in the art, as well as by the methods described in International Publication No. WO 01/12609 (particularly Examples 1-7 at page 24, line 6  
15 to page 49, line 16), published February 22, 2001, as well as International Publication No. WO 02/066450 (particularly compounds AA-HG at pages 59-108), published August 29, 2002, each of which is hereby incorporated by reference in its entirety. Further, specific examples of these compounds can be found in the publications.

                  Illustrative examples of JNK Inhibitors of structure (III) are:

20                   2H-Dibenzo[cd,g]  
indazol-6-one ;

7-Chloro-2H-dibenzo[cd,g]  
indazol-6-one ;

5

5-Dimethylamino-2*H*-  
dibenzo[*cd,g*]indazol-6-one;

7-Benzyloxy-2*H*-dibenzo[*cd,g*]indazol-  
6-one ;

N-(6-Oxo-2,6-dihydro-  
dibenzo[*cd,g*]indazol-5-yl)-  
acetamide ;

5-(2-Piperidin-1-yl-ethylamino)-2*H*-  
dibenzo[*cd,g*]indazol-6-one ;

5-Amino-anthra[9,1-*cd*]isothiazol-6-one ;

*N*-(6-Oxo-6*H*-anthra[9,1-*cd*]isothiazol-5-yl)-benzamide ;

7-Dimethylamino-anthra[9,1-*cd*]isothiazol-6-one ;

2-Oxa-1-aza-aceanthrylen-6-one;

and pharmaceutically acceptable salts thereof.

Other JNK Inhibitors that are useful in the present methods include, but are not limited to, those disclosed in International Publication No. WO 00/39101, (particularly at page 2, line 10 to page 6, line 12); International Publication No. WO

5 01/14375 (particularly at page 2, line 4 to page 4, line 4); International Publication No.  
WO 00/56738 (particularly at page 3, line 25 to page 6, line 13); International  
Publication No. WO 01/27089 (particularly at page 3, line 7 to page 5, line 29);  
International Publication No. WO 00/12468 (particularly at page 2, line 10 to page 4, line  
14); European Patent Publication 1 110 957 (particularly at page 19, line 52 to page 21,  
10 line 9); International Publication No. WO 00/75118 (particularly at page 8, line 10 to  
page 11, line 26); International Publication No. WO 01/12621 (particularly at page 8,  
line 10 to page 10, line 7); International Publication No. WO 00/64872 (particularly at  
page 9, line 1 to page, 106, line 2); International Publication No. WO 01/23378  
(particularly at page 90, line 1 to page 91, line 11); International Publication No. WO  
15 02/16359 (particularly at page 163, line 1 to page 164, line 25); United States Patent No.  
6,288,089 (particularly at column 22, line 25 to column 25, line 35); United States Patent  
No. 6,307,056 (particularly at column 63, line 29 to column 66, line 12); International  
Publication No. WO 00/35921 (particularly at page 23, line 5 to page 26, line 14);  
International Publication No. WO 01/91749 (particularly at page 29, lines 1-22);  
20 International Publication No. WO 01/56993 (particularly in at page 43 to page 45); and  
International Publication No. WO 01/58448 (particularly in at page 39), each of which is  
incorporated by reference herein in its entirety.

Pharmaceutical compositions including dosage forms of the invention,  
which comprise an effective amount of a JNK Inhibitor can be used in the methods of the  
25 invention.

#### **4.2 METHODS FOR TREATING OR PREVENTING ATHEROSCLEROSIS OR RESTINOSIS**

The Stent of the Invention can be used to treat or prevent any  
cardiovascular or renal disease, including atherosclerosis, and in particular, the treatment  
30 or prevention of restenosis after vascular intervention such as angioplasty, stent  
implantation, atherectomy or grafting.

Cardiovascular diseases that the Stent of the Invention are useful for  
treating or preventing include, but are not limited to, thrombolysis, restenosis, coronary  
heart disease and myocardial infarction.

External iliac	Foot
Femoral	Neck and external head regions
Gastric	Femoral artery
Hepatic	Thigh
Inferior mesenteric	Stomach
Internal carotid	Liver, gallbladder, pancreas, and duodenum
Internal iliac	Descending colon, rectum, and pelvic wall
Left gastric	Neck and internal head regions
Middle sacral	Rectum, urinary bladder, external genitalia, buttocks muscles, uterus and vagina
Ovarian	Esophagus and stomach
Palmar arch	Sacrum
Peroneal	Ovaries
Popliteal	Hand
Posterior tibial	Calf
Pulmonary	Knee
Radial	Calf
Renal	Lungs
Splenic	Forearm
Subclavian	Kidney
Superior mesenteric	Stomach, pancreas, and spleen
Testicular	Shoulder
Ulnar	Pancreas, small intestine, ascending and transverse colon
	Testes
	Forearm

5

The optimal dosage of a JNK Inhibitor in a coating for a stent or the material comprising the stent will be readily determined by those skilled in the art and will vary depending on the condition being treated, the particular JNK Inhibitor and mode of administration. Other factors include the weight and condition of the patient. It is to be understood that the present invention has application for both human and veterinary use.

In one embodiment, the Stent of the Invention will comprise about 0.01 mg to about 5000 mg of an effective amount of a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 0.1 mg to about 4500 mg of an effective amount a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 1 mg to about 4000 mg of an effective amount a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 25 mg to about 4000

5 mg of an effective amount a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 50 mg to about 3000 mg of an effective amount a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 100 mg to about 2000 mg of an effective amount a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 250 mg to about 1500 mg of an effective  
10 amount a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 500 mg to about 1000 mg of an effective amount a JNK Inhibitor. In another embodiment, the Stent of the Invention will comprise about 250 mg to about 500 mg of an effective amount a JNK Inhibitor.

Patients who receive stents typically have one or more of the following  
15 conditions: abnormal serum lipid levels, hypertension, cigarette smoking, diabetes mellitus, obesity, physical inactivity, hyperhomocysteinemia and chlamydia pneumoniae infection.

In one embodiment, the Stent of the Invention can be implanted into a patient that has previously undergone cardiovascular or renal surgery. In another  
20 embodiment, the Stent of the Invention can be implanted into a patient that has not previously undergone cardiovascular or renal surgery. In another embodiment, the Stent of the Invention can be implanted during an endoscopic retrograde cholangiopancreatography (ERCP).

In another embodiment, the Stent of the Invention implanted in a patient  
25 prior to undergoing surgery. In one embodiment, the surgery is cardiovascular or renal surgery.

#### **4.3 STENTS OF THE INVENTION**

Examples of stents that can be coated with an effective amount of a JNK Inhibitor or that can comprise a material having an effective amount of a JNK Inhibitor  
30 incorporated therein include, but are not limited to, all types of angioplasty devices including a stent or stent graft, a synthetic vascular graft or a biologic vascular graft.

In one embodiment, the stent comprises a polymer. Illustrative polymers include, but are not limited to a polyamide, a polyester, a polystyrene, a polypropylene, a polyacrylate, a polyvinyl, a polycarbonate, a polytetrafluorethylene, a  
35 polymethylmethacrylate, a polyethylene, a poly(ethylene terephthalate), a polyalkylene

5 oxalate, a polyurethane, a polysiloxane, a poly(dimethyl siloxane), a polycyanoacrylate,  
a polyphosphazene, a poly(amino acid), a ethylene glycol I dimethacrylate, a  
poly(methyl methacrylate), a poly(2-hydroxyethyl methacrylate), a poly(HEMA) or a  
polyhydroxyalkanoate compound. In one embodiment, the polymer has an effective  
amount of a JNK Inhibitor incorporated therein. In one embodiment, the polymer is  
10 biocompatible.

Illustrative examples of stents include, but are not limited to, esophageal  
stents, tracheal stents, biliary stents and prostatic stents. The stents can be uncovered,  
covered or anti-reflux (See U.S. Patent Nos. 5,984,965 and 5,647,843, each incorporated  
by reference herein). Any stent, stent graft or tissue engineered vascular graft known in  
15 the art can be coated, sealed or filled with a JNK Inhibitor. In one embodiment, the stent  
is biodegradable (See U.S. Patent No. 6,423,097, incorporated herein by reference). In  
another embodiment, the stent is nonbiodegradable. In another embodiment, the stent is  
self-expanding (See U.S. Patent No. 6,425,898, incorporated herein by reference). In  
another embodiment, the stent is balloon-expandable (See U.S. Patent No. 5,79,729,  
20 incorporated herein by reference). In another embodiment, the stent is made of a hollow  
tubular wire (See U.S. Patent No. 5,891,108, incorporated by reference herein).

Specific examples of stents include, but are not limited to, Palmaz,  
Palmaz-Schatz, Gianturco, Gianturco-Roubin, Gianturco-Rosch, Strecker or memory-  
shape stents.

25 In one embodiment, the stent is mounted on a catheter (See U.S. Patent  
No. 6,428,570, incorporated herein by reference).

In another embodiment, the stent is combined with a filter device useful  
for catching any plaques, particles or debris that becomes dislodged during or after  
implantation of the stent.

30 In another embodiment, the stent is a fabric-coated metal structure and  
can be configured into any desired shape or conformation, such as, for example, linear,  
tapered or bifurcated and may be prepared using fiber technology, such as, *e.g.*, crimped,  
woven, knitted, velour, double velour, with or without coils.

In another embodiment, the stent is prepared by chemical extrusion,  
35 casting or molding using, for example, porous materials, optionally containing an

5 effective amount of a JNK Inhibitor, having linear or random pores that are circular or geometric in shape.

In another embodiment, the stent comprises biomaterial such as decolderized chorioallantoic membranes from the placenta or other collagen material optionally having an effective amount of a JNK Inhibitor incorporated therein.

#### 10 4.4 **METHODS FOR MAKING A STENT OF THE INVENTION**

The invention also encompasses methods for making a Stent of the Invention, comprising the step of coating a stent with an effective amount of a JNK Inhibitor. In another embodiment, the coating further comprises a pharmaceutically acceptable carrier. The coating step includes, but is not limited to, dipping, spraying, 15 casting, layering, adding or filling a stent with an effective amount of one or more JNK Inhibitors.

The invention also encompasses methods for making a Stent of the Invention, comprising the step of manufacturing the stent using a material having an effective amount of a JNK Inhibitor incorporated therein. Methods for the manufacture 20 of a stent are well know to those skilled in the art. In another embodiment, the material comprising the Stent of the Invention further comprises a pharmaceutically acceptable carrier. In another embodiment, the material comprising the Stent of the Invention allows for controlled-release of a JNK Inhibitor.

In one embodiment, a stent is coated with an effective amount of a JNK 25 Inhibitor prior to use in the patient. In such an embodiment, the JNK Inhibitor can be coated or sealed on the stent. It should be recognized that multilayer coatings or releaseable coatings are also encompassed. Releaseable coatings can directly deposit a JNK Inhibitor to the area at risk for restenosis.

There are a variety of methods useful for making a Stent of the Invention. 30 The JNK Inhibitor can be applied to the stent by spraying at least one surface of the stent with the JNK Inhibitor in suspension, and allowing the applied surface to dry.

In another embodiment, the stent can be dipped into such a suspension, or a suspension comprising the JNK Inhibitor can be cast over the stent, or by layering a stent with a suspension of the JNK Inhibitor, or the JNK Inhibitor, in solution or 35 suspension form, can be added to a stent, or a stent can be filled with a solution or

5 suspension of the JNK Inhibitor. The JNK Inhibitor can also be applied to the inside surface of a stent. By applying the JNK Inhibitor to the inside of the stent, the JNK Inhibitor can promote proper reendothelialization of the lumen wall, promote wound healing or prevent one or more cardiovascular disease states, such as stenosis, restenosis or intimal and neointimal hyperplasias.

10 Methods for coating stents are also well-known in the art (*e.g.*, See U.S. Patent Nos. 6,153,252 and 6,299,604, incorporated by reference herein in their entirety). The preparation of controlled-release coated stents is also well-known in the art (*e.g.*, See U.S. Patent No. 6,358,556, incorporated by reference herein in its entirety). Other methods of coating stents are well known in the art and are contemplated by the  
15 invention (*e.g.*, See U.S. Patent No. 5,637,113 describes coating stents with a polymer film, U.S. Patent No. 5,837,313 describes a drug-release stent coating process; both of these patents are incorporated herein in their entireties and for all purposes.

The coating layer(s) should be thin enough so that delivery of the stent by catheter will not be impeded. In one embodiment, the coating is less than about 0.005  
20 inches thick. In another embodiment, the coating is less than about 0.002 inches thick. In another embodiment, the coating is less than about 0.001 inches thick. In another embodiment, the coating is less than about 0.0005 inches thick.

The amount of the JNK Inhibitor to be applied to the stent or incorporated into the stent can be determined empirically by measuring the efficacy of Stents of the  
25 Invention having different amounts of the JNK Inhibitor coated thereon or incorporated therein. Also, one skilled in the relevant art is capable of evaluating the efficacy of a Stent of the Invention.

The methods used for implanting the Stent of the Invention, which often involve surgery, are analogous to those used for the implantation of such stents which do  
30 not comprise a JNK Inhibitor, and, of course, depend on the nature of the condition to be modified or corrected. The surgery can be performed under either local or systemic anesthesia and, generally, involves an incision, spacing to accommodate the implant, insertion, and suture.

The JNK Inhibitor can be provided as a pharmaceutically acceptable  
35 formulation using formulation methods known to those skilled in the art. In addition, the

5 JNK Inhibitor can be incorporated into a biodegradable polymer allowing for sustained release of the compound. Biodegradable polymers and their use are described, for example, in detail in Brem *et al.*, *J. Neurosurg.* 74:441-446 (1991).

The formulations include those suitable for implantation into a patient. The formulations may be prepared by conventional pharmaceutical techniques. Such techniques include the step of admixing a JNK Inhibitor and a pharmaceutical carrier(s) or excipient(s). In general, the formulations can be prepared by admixing a JNK Inhibitor with liquid carriers or finely divided solid carriers or both, and then, if necessary, shaping the product.

Formulations for coating a stent thus comprise a JNK Inhibitor and optionally a pharmaceutically acceptable carrier, diluent or excipient. In preparing such formulations, the JNK Inhibitor is usually mixed with or diluted by an excipient. When the excipient serves as a diluent, it may be a solid, semi-solid, or liquid material which acts as a vehicle, carrier, or medium for the JNK Inhibitor. Examples of suitable excipients, include but are not limited to lactose, dextrose, sucrose, sorbitol, mannitol, starch, gum acacia, calcium silicate, microcrystalline cellulose, polyvinylpyrrolidinone, cellulose, water, syrup, and methyl cellulose, the formulations can additionally include lubricating agents such as talc, magnesium stearate and mineral oil, wetting agents, emulsifying and suspending agents, preserving agents such as methyl- and propylhydroxybenzoates, sweetening agents or flavoring agents.

The coating or material can be used to provide slow or controlled-release of one or more JNK Inhibitors using, for example, hydropropylmethyl cellulose, other polymer matrices, gels, permeable membranes, osmotic systems, multilayer coatings, microparticles, liposomes, or microspheres or a combination thereof to provide the desired release profile in varying proportions. Suitable controlled-release formulations known to those skilled in the art, including those described herein, can be readily selected for use with the pharmaceutical compositions of the invention.

Controlled-release coatings and material can be designed to initially release an amount of a JNK Inhibitor that promptly produces the desired therapeutic effect, and gradually and continually release other amounts of a JNK Inhibitor to maintain this level of therapeutic effect over an extended period of time. In order to

5 maintain this constant level of JNK Inhibitor in the body, the JNK Inhibitor must be released from the dosage form at a rate that will replace the amount of JNK Inhibitor being metabolized and excreted from the body. Controlled-release of a JNK Inhibitor can be stimulated by various inducers, including, but not limited to, pH, temperature, an enzyme, water, or other physiological conditions or compounds.

#### 10 4.5 OTHER ACTIVE AGENTS

The other active agent optionally present in the Stent of the Invention can be any compound that alone or together with a JNK Inhibitor is useful for treating or preventing a cardiovascular or renal disease, including atherosclerosis, and in particular, the treatment or prevention of restenosis after vascular intervention such as angioplasty.

15 For example, the other active agent can be an anticoagulant, such as an RGD peptide-containing compound, heparin, rapamycin, antithrombin compounds, platelet receptor antagonists, an anti-thrombin antibody, an anti-platelet receptor antibody, aspirin, a prostaglandin inhibitor, a platelet inhibitor, or tick anti-platelet peptide. The other active agent can also be a promoter of vascular cell growth, such as a growth factor receptor

20 antagonist, transcriptional activator or translational promoter. Alternatively, the other active agent can be an inhibitor of vascular cell growth, such as a growth factor inhibitor, a growth factor receptor antagonist, a transcriptional repressor or translational repressor, antisense DNA, antisense RNA, a replication inhibitor, an inhibitory antibody, an antibody directed against growth factors, or a bifunctional molecule. The other active

25 agent can also be a cholesterol-lowering agent, a vasodilating agent, or an agent that interferes with an endogenous vasoactive mechanism. Other examples of other active agents include an anti-inflammatory agent, an anti-platelet or fibrinolytic agent, an anti-neoplastic agent, an anti-allergic agent, an anti-rejection agent, an anti-microbial or anti-bacterial or anti-viral agent, a hormone, a vasoactive substance, an anti-invasive factor,

30 an anti-cancer drug, an antibody or lymphokine, an anti-angiogenic agent, a radioactive agent or gene therapy drug. The other active agent can be in its original commercial form, or together with a polymer or protein carrier, to achieve controlled and consistent release.

Illustrative examples of still other active agents include, but are not

35 limited to, IMiDs<sup>®</sup> and SelCIDs<sup>®</sup> (Celgene Corporation, New Jersey) (*e.g.*, those

5 disclosed in U.S. patent nos. 6,075,041; 5,877,200; 5,698,579; 5,703,098; 6,429,221;  
5,736,570; 5,658,940; 5,728,845; 5,728,844; 6,262,101; 6,020,358; 5,929,117;  
6,326,388; 6,281,230; 5,635,517; 5,798,368; 6,395,754; 5,955,476; 6,403,613;  
6,380,239; and 6,458,810, each of which is incorporated herein by reference), PDE IV  
inhibitors (*e.g.*, cilomast, theophylline, zardaverine, rolipram, pentoxifylline,  
10 enoximone), paclitaxel, docetaxel or a derivative thereof, an epothilone, a nitric oxide  
release agent, heparin, aspirin, coumadin, PPACK, hirudin, polypeptide from angiostatin  
and endostatin, methotrexate, 5-fluorouracil, estradiol, P-selectin Glycoprotein ligand-1  
chimera, abciximab, exochelin, eleutherobin and sarcodictyin, fludarabine, sirolimus,  
tranilast, VEGF, transforming growth factor (TGF)-beta, Insulin-like growth factor  
15 (IGF), platelet derived growth factor (PDGF), fibroblast growth factor (FGF), RGD  
peptide, a beta or gamma ray emitter (radioactive) agent.

In another embodiment, the Stent of the Invention further comprises an  
antibiotic agent or an antiviral agent, or mixtures thereof, which can prevent graft  
rejection.

#### 20                   **4.6    KITS**

The invention provides a pharmaceutical pack or kit comprising one or  
more containers containing a Stent of the Invention useful for the treatment or prevention  
of a cardiovascular or renal disease. Optionally associated with such container(s) can be  
a notice in the form prescribed by a governmental agency regulating the manufacture,  
25 use or sale of pharmaceuticals or biological products, which notice reflects approval by  
the agency of manufacture, use or sale for human administration; or instructions for the  
Stent of the Invention's use.

The following examples will serve to further typify the nature of this  
invention but should not be construed as a limitation in the scope thereof.

### 30                   **5.       EXAMPLES**

#### **5.1       COATING OF A STENT**

A 5% (w/w) silicone solution in tetrahydrofuran (THF) (HPLC grade,  
Aldrich or EM Science) is prepared by adding THF and a crosslinker agent into the  
silicone mixture. A separate 0.5% (w/w) solution of a JNK Inhibitor is prepared. The

5 ratio of  $W_{\text{drug}}/W_{\text{silicone solid}}$  is about 0.1. The coating of the stent in an expanded state is accomplished by spraying one cycle of silicone solution, waiting for a short period of time (about 30 seconds), and spraying one cycle of JNK Inhibitor solution, waiting for a short period of time (about 30 seconds), and then repeating the spraying sequence. The very last spray cycle is silicone solution. For a coating thickness of 30 microns, about 30  
10 cycles each is applied. The number of spray cycles used depends on the solution viscosity, the droplet size and the flow rate. The coated stent is then moved to a convection oven and cured at 150°C for 45 minutes.

## 5.2 JNK INHIBITOR ACTIVITY ASSAYS

The ability of a JNK Inhibitor to inhibit JNK and accordingly, to be useful  
15 for the treatment or prevention of a cardiovascular or renal disease, can be demonstrated using one or more of the following assays.

### 5.2.1 JNK2 ASSAY

To 10  $\mu\text{L}$  of the JNK Inhibitor in 20% DMSO/80% dilution buffer consisting of 20 mM HEPES (pH 7.6), 0.1 mM EDTA, 2.5 mM magnesium chloride,  
20 0.004% Triton x100, 2  $\mu\text{g}/\text{mL}$  leupeptin, 20 mM  $\beta$ -glycerolphosphate, 0.1 mM sodium vanadate, and 2 mM DTT in water is added 30  $\mu\text{L}$  of 50 ng His6-JNK2 in the same dilution buffer. The mixture is preincubated for 30 minutes at room temperature. Sixty microliters of 10  $\mu\text{g}$  GST-c-Jun(1-79) in assay buffer consisting of 20 mM HEPES (pH 7.6), 50 mM sodium chloride, 0.1 mM EDTA, 24 mM magnesium chloride, 1 mM DTT,  
25 25 mM PNPP, 0.05% Triton x100, 11  $\mu\text{M}$  ATP, and 0.5  $\mu\text{Ci}$   $\gamma$ - $^{32}\text{P}$  ATP in water is added and the reaction is allowed to proceed for 1 hour at room temperature. The c-Jun phosphorylation is terminated by addition of 150  $\mu\text{L}$  of 12.5% trichloroacetic acid. After 30 minutes, the precipitate is harvested onto a filter plate, diluted with 50  $\mu\text{L}$  of the scintillation fluid and quantified by a counter. The  $\text{IC}_{50}$  values are calculated as the  
30 concentration of the JNK Inhibitor at which the c-Jun phosphorylation is reduced to 50% of the control value. In one embodiment, JNK Inhibitors have an  $\text{IC}_{50}$  value ranging 0.01 - 10  $\mu\text{M}$  in this assay.

5

### **5.2.2 JNK3 ASSAY**

To 10  $\mu$ L of the JNK Inhibitor in 20% DMSO/80% dilution buffer consisting of 20 mM HEPES (pH 7.6), 0.1 mM EDTA, 2.5 mM magnesium chloride, 0.004% Triton x100, 2  $\mu$ g/mL leupeptin, 20 mM  $\beta$ -glycerolphosphate, 0.1 mM sodium vanadate, and 2 mM DTT in water is added 30  $\mu$ L of 200 ng His6-JNK3 in the same dilution buffer. The mixture is preincubated for 30 minutes at room temperature. Sixty microliter of 10  $\mu$ g GST-c-Jun(1-79) in assay buffer consisting of 20 mM HEPES (pH 7.6), 50 mM sodium chloride, 0.1 mM EDTA, 24 mM magnesium chloride, 1 mM DTT, 25 mM PNPP, 0.05% Triton x100, 11  $\mu$ M ATP, and 0.5  $\mu$ Ci  $\gamma$ -<sup>32</sup>P ATP in water is added and the reaction is allowed to proceed for 1 hour at room temperature. The c-Jun phosphorylation is terminated by addition of 150  $\mu$ L of 12.5% trichloroacetic acid. After 30 minutes, the precipitate is harvested onto a filter plate, diluted with 50  $\mu$ L of the scintillation fluid and quantified by a counter. The IC<sub>50</sub> values are calculated as the concentration of the JNK Inhibitor at which the c-Jun phosphorylation is reduced to 50% of the control value. In one embodiment, JNK Inhibitors have an IC<sub>50</sub> value ranging 0.01 - 10  $\mu$ M in this assay.

20

### **5.2.3 JURKAT T-CELL IL-2 PRODUCTION ASSAY**

Jurkat T cells (clone E6-1) are purchased from the American Tissue Culture Collection and maintained in growth media consisting of RPMI 1640 medium containing 2 mM L-glutamine (Mediatech), with 10% fetal bovine serum (Hyclone) and penicillin/streptomycin. All cells are cultured at 37°C in 95% air and 5% CO<sub>2</sub>. Cells are plated at a density of 0.2 x 10<sup>6</sup> cells per well in 200  $\mu$ L of media. JNK Inhibitor stock (20 mM) is diluted in growth media and added to each well as a 10x concentrated solution in a volume of 25  $\mu$ L, mixed, and allowed to pre-incubate with cells for 30 minutes. The vehicle (dimethylsulfoxide) is maintained at a final concentration of 0.5% in all samples. After 30 minutes the cells are activated with PMA (phorbol myristate acetate; final concentration 50 ng/mL) and PHA (phytohemagglutinin; final concentration 2  $\mu$ g/mL). PMA and PHA are added as a 10x concentrated solution made up in growth media and added in a volume of 25  $\mu$ L per well. Cell plates are cultured for 10 hours. Cells are pelleted by centrifugation and the media removed and stored at -20 °C. Media aliquots are analyzed by sandwich ELISA for the presence of IL-2 as per the

35

5 manufacturers instructions (Endogen). The IC<sub>50</sub> values are calculated as the concentration of the JNK Inhibitor at which the Il-2 production was reduced to 50% of the control value. In one embodiment, JNK Inhibitors have an IC<sub>50</sub> value ranging 0.1 - 30  $\mu$ M in this assay.

#### 10 5.2.4 RAT *IN VIVO* LPS-INDUCED TNF- $\alpha$ PRODUCTION ASSAY

Male CD rats procured from Charles River Laboratories at 7 weeks of age are allowed to acclimate for one week prior to use. A lateral tail vein is cannulated percutaneously with a 22-gage over-the-needle catheter under brief isoflurane anesthesia. Rats are administered a JNK Inhibitor either by intravenous injection via the tail vein catheter or oral gavage 15 to 180 min prior to injection of 0.05 mg/kg LPS (E. Coli 15 055:B5). Catheters are flushed with 2.5 mL/kg of normal injectable saline. Blood is collected via cardiac puncture 90 minutes after LPS challenge. Plasma is prepared using lithium heparin separation tubes and frozen at -80°C until analyzed. TNF- $\alpha$  levels are determined using a rat specific TNF- $\alpha$  ELISA kit (Busywork). The ED<sub>50</sub> values are calculated as the dose of the JNK Inhibitor at which the TNF- $\alpha$  production is reduced to 20 50% of the control value. In one embodiment, JNK Inhibitors have an ED<sub>50</sub> value ranging 1-30 mg/kg in this assay.

#### 5.2.5 DETECTION OF PHOSPHORYLATED c-JUN

Human umbilical vein endothelial cells (HUVEC) are cultured to 80% 25 confluency and then pre-treated with a JNK Inhibitor (30  $\mu$ M) at a final concentration of 0.5% DMSO. After 30 minutes, cells are stimulated with TNF $\alpha$  (30 ng/ml) for 20 minutes. Cells are washed, scraped from the plate, lysed with 2x Laemmli buffer and heated to 100°C for 5 minutes. Whole cell lysate (approx. 30  $\mu$ g) is fractionated on Tris-glycine buffered 10% SDS-polyacrylamide gels (Novex, San Diego, CA) and transferred 30 to nitrocellulose membrane (Amersham, Piscataway, NJ). Membranes are blocked with 5% non-fat milk powder (BioRad, Hercules, CA) and incubated with antibody to phospho-cJun (1:1000 #91645) (New England Biolabs, Beverly, MA) and then donkey anti-rabbit horse radish peroxidase conjugated antibody (1:2500) (Amersham) in phosphate buffered saline with 0.1% Tween-20 and 5% non-fat milk powder.

35 Immunoreactive proteins are detected with chemiluminescence and autoradiography

5 (Amersham). In one embodiment, JNK Inhibitors show greater than 50% inhibition of c-Jun phosphorylation at 30  $\mu$ m in this assay.
